COX GETS BUSY AT CONVENTION

Says He Seeks to Harmonize the Several Factions.

ISSUES FORMAL STATEMENT

Former Ohio Governor Declares He Would Not Accept the Presidential Nomination If It Were Tendered to Him—Ansberry, Who Sought Immediate Investigation of Convention Rumors May Be Disappointed.

New York, July 8.—Declaring he would not accept the presidential nomination if it were tendered to him, former Governor James M. Cox of Ohio said he had come to this city to attempt to harmonize the several factions in the Democratic national convention.

Mr. Cox stated he would not favor any special candidate for the nomination. He said:

"I have come to New York at the urgent request of prominent members of the party who have expressed to me the belief that a trying emergency has arisen and that the offices of the titular leader of the Democracy should be extended, with a view of bringing harmony.

"At the outset, let it be understood that not only am I not a candidate, but I will not accept the nomination if tendered me. I do not know whether I can be of any service, but my sense of gratitude and duty tells me that I should try.

"It is unnecessary to elaborate upon the need of an agreement between the delegates. Nothing will be gained by going into events or conditions that have come and gone since the convention assembled. I am not here for or against any candidate, but am simply seeking to initiate and develop a purely Democratic and non-factional view, out of which will come both a nomination and a Democratic president."

Timothy T. Ansberry, alternate delegate from Ohio, who requested Senator Borah's committee on investigation of campaign expenditures to undertake an investigation of the New York convention, has received a favorable reply from the Idaho senator. One of the trails which the committee will be asked to follow will lead up to a charge that the McAdoo management offered a prominent Ohio delegate the position of secretary of state in the McAdoo cabinet, provided he would desert Governor Cox and lead his followers over to McAdoo. Another report which the committee will be asked to probe is that a certain rich individual, whose name is being mentioned, made a donation of \$100,000 to put McAdoo across the nomination goal at the New York convention.

It had been hoped by Ansberry and those associated with him that Senator Borah would proceed with the investigation immediately, while the convention is in session, so that the stories about lavish expenditures to nominate McAdoo might be ventilated while the delegates are still considering the presidential nomination, but it appears now that their wishes in this respect will not be gratified.

It became known here why Newton D. Baker discouraged delegations from other states that showed a willingness to support him for the presidential nomination. He could not at that time tell them that he would not stand on the platform without adding to the disruption in the convention and he did not care to do that. If the convention should nominate Baker it would have to redraft the league of nations plank of the platform which, of course, is out of the question, otherwise the distinguished Ohioan would not accept the nomination.

Several Ohio Democratic leaders say they are expecting Mr. Baker and Justice Clarke to observe a "masterful silence" during the campaign.

Former Governor James E. Campbell of Ohio was complimented by the convention when it was announced by a member of the Ohio delegation that it was the 81st birthday anniversary of the Columbus man. The delegates arose en masse to receive the announcement.

Killed by Train.

Lorain, O., July 8.—Isaac Honecker, president of the Lorain Lumber and Manufacturing company, was killed by a Nickel Plate train near Vermilion.

John D. Rockefeller, Sr., quietly observed his 85th birthday anniversary in New York.

GEORGE SHERMAN

Georgian Famous For His Long Walks to Confederate Reunions.

TO SUPPORT LA FOLLETTE

Socialist Nationalist Convention Indorses His Candidacy.

Cleveland, July 8.—The Socialist national convention was urged to unite with the Conference for Progressive Political Action in support of Senator Robert M. LaFollette's independent candidacy for president in a majority report of the national executive committee of the Socialist party. The committee, however, made this reservation, that the Socialist party declare its firm adherence to the cardinal principles of socialism. The report further urged cooperation with the conference for progressive political action at the polls and pledged support of the vice presidential candidate to be sponsored by the progressives.

The minority report attacked the LaFollette platform as "meaningless" and advocated placing a Socialist ticket in the field.

After hours of debate the majority report was adopted by a vote of 106 to 17.

Accuses Farmer.

Chicago, July 8.—A partial confession by George Peek, accusing John Wright, a farmer, who was arrested, has been obtained by State's Attorney William Johnson in connection with the sending of a letter demanding \$50,000 from Senator and Mrs. McAdoo. It was announced, Wright was released on \$5,000 bonds. He is Peek's employee.

Building's Sale Sanctioned.

Cleveland, July 8.—Judge Alva J. Pearson sanctioned the contract for the sale of the Cleveland Discount building to the Union Discount company. The amount of the sale is \$450,000. W. H. Hopple, head of the Union Discount company, is making the negotiations for the sale.

LEAD IS LOST BY M'ADOO

Vote Pounded to New Low Record in 86th Ballot.

POWER OF VETO ALSO LOST

Attack on McAdoo Lines, Launched at the Night Session, Gives Governor Smith the Lead, With Senator Ralston in Third Place—Senator Glass and Davis of West Virginia Still in the Running.

New York, July 8.—For the first time since the balloting began William G. McAdoo lost the lead to Governor Al Smith.

The governor overcame McAdoo's lead in the 86th ballot, taken at the night session of the Democratic national convention. McAdoo also lost his power of one-third veto over the convention. The totals for the 86th ballot were: Smith 369, McAdoo 353 and Ralston 92.

The attack on the McAdoo forces was launched at the night session, and the Californian's total was hammered to a new low record. Senator Ralston of Indiana was boosted into third place by the maneuver. At the end of the 86th ballot the leaders stood: McAdoo 353.5, Smith 365, Ralston 86, Glass 72.5, Davis 66. This ballot showed a loss of 29.5 for McAdoo, a loss of 3 for Smith, a gain of 62 for Ralston, a loss of 6.5 for Davis and a loss of 3.5 for Glass.

Further inroads were made on the McAdoo strength during the 85th ballot. On that ballot the leaders stood: McAdoo 380.5, Smith 363, Ralston 87, Davis 68, Glass 67.5. Governor Smith passed McAdoo in the 86th ballot. In a whirlwind attack the Smith forces and the anti-McAdoo coalition crashed down blocks of McAdoo votes on succeeding ballots, until McAdoo, who started the convention with a lead of almost 200 over the New York governor, was running behind him. The summary of the 86th ballot follows: Smith 360, McAdoo 353.5, Ralston 92, Glass 72.5, Davis 65.5.

Before the night session a conference was held in the office of Thomas Taggart, the Indiana leader and sponsor for Senator Ralston. Taggart denied its purpose was to discuss a move to center on Ralston, but a majority vote of those present favored concentrating on the Indiana candidate. Out of this conference and various movements under the surface the Ralston boom emerged once more from the temporary eclipse of last week. At the same time in another sector of the anti-McAdoo forces plans were made to give "a run" to Senator Glass of Virginia, who had gathered considerable strength during the afternoon session.

Norman E. Mack, one of the Smith field marshals on the convention floor, promised there would be no letup in the raiding and hacking drive at the McAdoo lines. "There are evidences," he said, "that the opposition is weakening and that time works on our side."

FIGHT FOR LIFE LOST BY COOLIDGE'S SON

Youth Succumbs to Attack of Blood Poisoning.

Washington, July 8.—Calvin Coolidge, Jr., son of President Coolidge, lost his battle for life. He passed away at 10:27 last night at Walter Reed hospital.

Blood poisoning, from which young Calvin had been suffering for a week or more, finally gained the upper hand late yesterday, when all artificial means of preserving life were exhausted. He remained conscious almost throughout. President and Mrs. Coolidge were with him.

An eighth physician, Dr. William Gerry Morgan of Washington, a stomach specialist, had been added to the retinue of medical experts who battled with the septic infection. Almost an entire wing of the hospital, the pride of the army medical service, had been given up to the effort at saving the boy's life by rallying the resources of modern medicine to his aid.

Calvin was 16 years of age. His trouble arose while playing tennis last week. A small blister developed on the big toe on his left foot.

MISS MINNIE GOLDMAN

Appeared in Court as Counsel For Her Father.

Miss Goldman, a Chicago girl, defended her father, Abraham Goldman, one of the three defendants charged with wrecking the Warren National bank, in the trial at Worcester, Mass.

He was in some pain on Tuesday and Wednesday, and the white house doctors feared he might have appendicitis. The small wound, showing practically no signs of infection, concealed the body ravages it had created. Then the infection became more pronounced and the poisoning was discovered.

Hundreds of messages of condolence have been received at the white house.

DOINGS IN OHIO

Husband and Wife Shot.

Cleveland, July 8.—Mrs. John Venerka, 34, is dead and her husband was fatally wounded, following an alleged attempt by Venerka to end both their lives. According to William Tresney, 12, Mrs. Venerka's son by a former marriage, the shooting occurred because his wife protested his following her home from a picnic. Mrs. Venerka was shot twice through the head, once through the chest and the right cheek. Her husband was shot through the temple.

Orders Disbursement of Assets.

Dayton, O., July 8.—Federal court ordered final disbursement of assets of the Davis Sewing Machine company. The order directed Earl H. Turner, receiver of the bankrupt company, to turn over all accounts receivable, notes and negotiable paper and all other assets of the company to the Dayton Sewing Machine company upon payment of \$60,000 to the receiver and \$5,000 to the general creditors of the organization.

Cable Loses Sight of One Eye.

Lima, O., July 8.—Congressman John L. Cable, Republican candidate for the gubernatorial nomination, has lost the sight of his right eye. Dr. Paul Stuber, eye specialist, announced, following a consultation. Cable was injured Saturday night when a splinter from a box of household goods which he was unpacking at the Cable home here penetrated his eyeball.

School at Wright Field.

Dayton, O., July 8.—More than 150 aviation reserve officers arrived at Wilbur Wright field to receive two weeks' training in airplane theory and practice. The officers came from Ohio, Indiana and Kentucky. Instructors from both McCook and Wilbur Wright fields will have charge of the various classes.

Four Go Over Embankment.

Gallipolis, O., July 8.—Charles Brown, 48, contractor, and John Bell were fatally injured and Mrs. Beatrice Lyons and Miss Ada Thomas severely hurt as a result of an automobile in which they were riding plunging over a 50-foot embankment near Point Pleasant.

Youth Hangs Self.

Troy, O., July 8.—David Coddington, Jr., 19, a son of a prominent farmer residing two miles south of Tippecanoe City, ended his life by hanging himself with a rope from a rafter in the barn at his father's home. The cause of the act is not known.

Valuable Watch Stolen.

Cincinnati, July 8.—A diamond studded watch and fob, valued at \$1,000, was stolen from the pocket of the jacket of Mrs. Robert M. Kahn, while she was shopping in a downtown store here.

Joseph Schwartz, Jr., 20, was killed and his parents injured when a bomb explosion wrecked a wholesale sugar house at Detroit.

FOR RELIEF OF STORM VICTIMS

Efforts of Various Organizations to Be Co-ordinated.

STATEWIDE DRIVE LAUNCHED

Conference Held Between Governor Donahey, the State Relief Commission and the Various Agencies That Will Participate Actively in the Campaign—Nationwide Drive Not Favored.

Columbus, July 8.—At a conference between Governor Donahey, Chairman Fred A. Miller of the state relief commission and heads of several civic organizations, co-ordination of the various agencies which have been designated by the governor as active participants in the statewide campaign for the relief of the victims of the Lorain disaster was accomplished.

It was announced that headquarters for Lorain relief will be opened in the state house by the governor, making use of all available stenographic and clerical aid that can be provided by the various state departments. Letters and telegrams are being sent out by the governor to all insurance companies, building and loan associations and large industrial concerns in the state, asking for large contributions to the fund.

Chairman Miller said: "The popular subscription is proceeding nicely, but larger contributions and subscriptions from corporations and well-to-do people are not coming in as fast as they might."

Governor Donahey and Chairman Miller are still against a nation-wide campaign for funds, in spite of the protests of Mayor Hoffman of Lorain. The general assembly will not be called until the relief commission completes its investigation and finds out how much money will be needed in addition to what is raised by popular subscription, the governor said. He added: "The relief commission is studying out the problems of Lorain and Sandusky seriously and will not act on impulses. When the time comes for the calling of the legislature into session, I shall not hesitate to take such action."

The plan outlined by State Chairman Miller and approved by the governor provides that Rotary and Kiwanis clubs shall be the active soliciting agencies for popular subscription in cities where they have clubs, and that they shall call upon other luncheon clubs to assist them. In cities where there are no luncheon clubs chambers of commerce shall be in charge. Organizations such as the farm bureau, bankers' associations and building and loan associations, will pay particular attention to their own membership. The Ohio Federation of Women's clubs has been designated as the official agency representing the women of Ohio in the relief work.

State Director of Education Vernon M. Reigel reported to the governor that the motion picture interests in Ohio would give screen publicity to the relief campaign immediately.

The governor pardoned nine liquor law violators held in the Lorain county jail on condition they place themselves at the disposal of the relief commission and assist in cleaning up the city.

Rail Employee Blamed.

Washington, July 8.—Director Borland of the bureau of safety of the interstate commerce commission reported to the commission that the wreck of a Wabash passenger train at Williamsport, Ind., on June 1, which resulted in the death of 13 persons and injury to 48, was caused by failure of a railroad employee to properly lock a switch, which opened as the train passed over it. The report said the switch had been last closed by Head Brakeman Torrance of the Wabash, who later, in response to a question, told Conductor Nelson that it had been properly closed.

Cancer Cure Announced.

London, July 8.—Vice Chancellor J. George Adams of Liverpool university, formerly of McGill university, in a statement declared that research work at the university had reached a stage when it was possible to effect the disappearance of some, if not all, internal cancers.

Drowns in Pool.

Youngstown, O., July 8.—Leroy Emery, Jr., 11, was drowned while swimming in a pool in Yellow Creek park at Struthers. The swimming pool had not been opened to the public.

SCORE ELEVEN POINTS

Americans Defeated in the Olympia 100-Meter Dash.

Paris, July 8.—America lost the 100-meter dash at the Colombes stadium. H. M. Abrahams, former Cambridge university (England) star, dashed the hopes of the United States for a clean sweep in the 100-meter race at the Olympic, when he defeated the four fastest American runners and won the final heat in record time. Jackson V. Scholz, New York A. C. crack, was second, while the New Zealand sprinter, Perrett, took third place. Chester Bowman, Syracuse, who won the final trial at Cambridge, Mass., last month, was fourth, with Charley Paddock fifth and Loren Murchisan sixth. America picked 11 points in this event, where at least 18, with a possibility of 25, had been counted on. Abraham's 10 points counted for England. His time was 10 3-5.

Finland won two of the three heats in the 3,000 meters steeplechase, placing three men in the finals. The United States got two runners into the finals.

Sleep Returns.

Washington, July 8.—C. Bascom Sleep, secretary to President Coolidge, returned to his desk after an absence of three weeks. "I am back on the job," he said, dispelling rumors that he had quit permanently over a disagreement between himself and William M. Butler, Republican national committee chairman, over the management of the Cleveland convention.

DOHENYS IN COURT

Attack Indictments Against Them in the Oil Cases.

Washington, July 8.—E. L. Doheny and E. L. Doheny, Jr., filed motions in the district supreme court to quash the indictments recently returned against them by the special oil grand jury, charging conspiracy and bribery. They contended the indictments were invalid because of the presence of a department of justice official in the grand jury room during the taking of testimony.

The motion will not be argued until the court reconvenes in October for the fall term. Frank J. Hogan, attorney for the Dohenys, contended that the agent's presence was "contrary to law and subversive of the rights of his clients," because it was the intent of congress to take the prosecution of the cases out of the hands of the department of justice and to that end President Coolidge appointed Atlee Pomerene and Owen J. Roberts as special counsel.

Four Boys Held.

Batavia, O., July 8.—Four suspects, all boys, are held for investigation here. They were found armed when arrested in front of the First National bank in this city. The boys came from Pikeville, Ky.

American Flyers in Persia.

London, July 8.—The American world flyers arrived at Charbar, Persia, from Karachi on their way to Bender Abbas.

MARKET QUOTATIONS

CHICAGO, July 8.

Cattle—Top steers, \$10 35; bulk of sales, \$8 75; stockers and feeders, \$5 50; calves, \$9 50; hogs—Top, \$7 30; bulk of sales, \$6 50; packing hogs, \$6 25; pigs, \$4 25; sheep and lambs—Native lambs, \$9 15; ewes, \$2 50; receipts—Cattle, 28,000; hogs, 65,000; sheep and lambs, 25,000.

CLEVELAND, July 8.

Cattle—Steers, \$5 50; hogs, \$5 50; calves, \$4 12 50; hogs—Mixed, \$7 60; heavies, \$7 75; pigs and lights, \$6 50; roughs, \$5 75; stags, \$4 50.

Sheep and Lambs—Lambs, \$8 15; ewes, \$2 50.

Receipts—Cattle, 800; hogs, 7,000; sheep and lambs, 1,000.

PITTSBURGH, July 8.

Cattle—Steers, \$9 75; hogs, \$5 50; calves, \$4 25; hogs—Mixed, \$7 60; heavies, \$7 75; pigs and lights, \$6 50; roughs, \$5 75; stags, \$4 25.

Sheep and Lambs—Top sheep, \$7; top lambs, \$14.

Receipts—Cattle, 1,000; hogs, 6,500; sheep and lambs, 3,000.

CINCINNATI, July 8.

Cattle—Steers, \$4 09 15; hogs, \$4 09; calves, \$2 50; hogs—Mixed, \$7 60; heavies, \$7 75; pigs and lights, \$6 50; roughs, \$5 75; stags, \$4 25.

Sheep and Lambs—Lambs, \$8 15; ewes, \$2 50.

Receipts—Cattle, 2,200; hogs, 7,000; sheep and lambs, 3,000.

BALTIMORE, July 8.

Butter—Fancy creamery, 43¢; Ohio rolls, 25¢; store packed, 28¢.

Eggs—Ohio firsts, 28¢; live poultry—Young chickens, 35¢; old hens, 18¢; old roosters, 15¢.

BOSTON, July 8.

Wool—Ohio and Pennsylvania Reeces; uncleaned, 50¢; one-half blood washed, 49¢; three-eighths blood washed, 48¢; one-quarter blood washed, 47¢.

TOLEDO, July 8.

Wheat, \$1 19 1/2; corn, \$1 05 1/2; oats, 37¢; cloverseed, \$1 40.

The governor overcame McAdoo's lead in the 86th ballot, taken at the night session of the Democratic national convention. McAdoo also lost his power of one-third veto over the convention. The totals for the 86th ballot were: Smith 369, McAdoo 353 and Ralston 92.

The attack on the McAdoo forces was launched at the night session, and the Californian's total was hammered to a new low record. Senator Ralston of Indiana was boosted into third place by the maneuver. At the end of the 84th ballot the leaders stood: McAdoo 388.5, Smith 365, Ralston 86, Glass 72.5, Davis 65. This ballot showed a loss of 29.5 for McAdoo, a loss of 3 for Smith, a gain of 62 for Ralston, a loss of 6.5 for Davis and a loss of 3.5 for Glass.

Further inroads were made on the McAdoo strength during the 85th ballot. On that ballot the leaders stood: McAdoo 389.5, Smith 363, Ralston 87, Davis 68, Glass 67.5.

Governor Smith passed McAdoo in the 86th ballot. In a whirlwind attack the Smith forces and the anti-McAdoo coalition crashed down blocks of McAdoo votes on succeeding ballots, until McAdoo, who started the convention with a lead of almost 200 over the New York governor, was running behind him. The summary of the 86th ballot follows: Smith 360, McAdoo 353.5, Ralston 92, Glass 72.5, Davis 65.5.

Before the night session a conference was held in the office of Thomas Taggart, the Indiana leader and sponsor for Senator Ralston. Taggart denied its purpose was to discuss a move to center on Ralston, but a majority vote of those present favored concentrating on the Indiana candidate. Out of this conference and various movements under the surface the Ralston boom emerged once more from the temporary eclipse of last week. At the same time in another sector of the anti-McAdoo forces plans were made to give "a run" to Senator Glass of Virginia, who had gathered considerable strength during the afternoon session.

Norman E. Mack, one of the Smith field marshals on the convention floor, promised there would be no letup in the raiding and hacking drive at the McAdoo lines. "There are evidences," he said, "that the opposition is weakening and that time works on our side."

FIGHT FOR LIFE LOST BY COOLIDGE'S SON

Youth Succumbs to Attack of Blood Poisoning.

Washington, July 8.—Calvin Coolidge, Jr., son of President Coolidge, lost his battle for life. He passed away at 10:27 last night at Walter Reed hospital.

Blood poisoning, from which young Calvin had been suffering for a week or more, finally gained the upper hand late yesterday, when all artificial means of preserving life were exhausted. He remained conscious almost throughout. President and Mrs. Coolidge were with him.

An eighth physician, Dr. William Gerry Morgan of Washington, a stomach specialist, had been added to the retinue of medical experts who battled with the septic infection. Almost an entire wing of the hospital, the pride of the army medical service, had been given up to the effort at saving the boy's life by rallying the resources of modern medicine to his aid.

Calvin was 16 years of age. His trouble arose while playing tennis last week. A small blister developed on the big toe on his left foot.

MISS MINNIE GOLDMAN

Appeared in Court as Counsel For Her Father.

Miss Goldman, a Chicago girl, defended her father, Abraham Goldman, one of the three defendants charged with wrecking the Warren National bank, in the trial at Worcester, Mass.

He was in some pain on Tuesday and Wednesday, and the white house doctors feared he might have appendicitis. The small wound, showing practically no signs of infection, concealed the body ravages it had created. Then the infection became more pronounced and the poisoning was discovered.

Hundreds of messages of condolence have been received at the white house.

DOINGS IN OHIO

Husband and Wife Shot.

Cleveland, July 8.—Mrs. John Venerka, 34, is dead and her husband was fatally wounded, following an alleged attempt by Venerka to end both their lives. According to William Tresney, 12, Mrs. Venerka's son by a former marriage, the shooting occurred when Venerka became enraged because his wife protested his following her home from a picnic. Mrs. Venerka was shot twice through the head, once through the chest and the right cheek. Her husband was shot through the temple.

Orders Disbursement of Assets.

Dayton, O., July 8.—Federal court ordered final disbursement of assets of the Davis Sewing Machine company. The order directed Earl H. Turner, receiver of the bankrupt company, to turn over all accounts receivable, notes and negotiable paper and all other assets of the company to the Dayton Sewing Machine company upon payment of \$60,000 to the receiver and \$5,000 to the general creditors of the organization.

Cable Loses Sight of One Eye.

Lima, O., July 8.—Congressman John L. Cable, Republican candidate for the gubernatorial nomination, has lost the sight of his right eye. Dr. Paul Stuber, eye specialist, announced, following a consultation. Cable was injured Saturday night when a splinter from a box of household goods which he was unpacking at the Cable home here penetrated his eyeball.

School at Wright Field.

Dayton, O., July 8.—More than 150 aviation reserve officers arrived at Wilbur Wright field to receive two weeks' training in airplane theory and practice. The officers came from Ohio, Indiana and Kentucky. Instructors from both McCook and Wilbur Wright fields will have charge of the various classes.

Four Go Over Embankment.

Gallipolis, O., July 8.—Charles Brown, 48, contractor, and John Bell were fatally injured and Mrs. Beatrice Lyons and Miss Ada Thomas severely hurt as a result of an automobile in which they were riding plunging over a 50-foot embankment near Point Pleasant.

Youth Hangs Self.

Troy, O., July 8.—David Coddington, Jr., 19, a son of a prominent farmer residing two miles south of Tippecanoe City, ended his life by hanging himself with a rope from a rafter in the barn at his father's home. The cause of the act is not known.

Valuable Watch Stolen.

Cincinnati, July 8.—A diamond studded watch and fob, valued at \$1,000, was stolen from the pocket of the jacket of Mrs. Robert M. Kahn, while she was shopping in a downtown store here.

Joseph Schwartz, Jr., 20, was killed and his parents injured when a bomb explosion wrecked a wholesale sugar house at Detroit.

FOR RELIEF OF STORM VICTIMS

Efforts of Various Organizations to Be Co-ordinated.

STATEWIDE DRIVE LAUNCHED

Conference Held Between Governor Donahey, the State Relief Commission and the Various Agencies That Will Participate Actively in the Campaign—Nationwide Drive Not Favored.

Columbus, July 8.—At a conference between Governor Donahey, Chairman Fred A. Miller of the state relief commission and heads of several civic organizations, co-ordination of the various agencies which have been designated by the governor as active participants in the statewide campaign for the relief of the victims of the Lorain disaster was accomplished.

It was announced that headquarters for Lorain relief will be opened in the statehouse by the governor, making use of all available stenographic and clerical aid that can be provided by the various state departments. Letters and telegrams are being sent out by the governor to all insurance companies, building and loan associations and large industrial concerns in the state, asking for large contributions to the fund.

Chairman Miller said: "The popular subscription is proceeding nicely, but larger contributions and subscriptions from corporations and well-to-do people are not coming in as fast as they might."

Governor Donahey and Chairman Miller are still against a nationwide campaign for funds, in spite of the protests of Mayor Hoffman of Lorain. The general assembly will not be called until the relief commission completes its investigation and finds out how much money will be needed in addition to what is raised by popular subscription, the governor said. He added: "The relief commission is studying out the problems of Lorain and Sandusky seriously and will not act on impulses. When the time comes for the calling of the legislature into session, I shall not hesitate to take such action."

The plan outlined by State Chairman Miller and approved by the governor provides that Rotary and Kiwanis clubs shall be the active soliciting agencies for popular subscription in cities where they have clubs, and that they shall call upon other luncheon clubs to assist them. In cities where there are no luncheon clubs chambers of commerce shall be in charge. Organizations such as the farm bureau, bankers' associations and building and loan associations, will pay particular attention to their own membership. The Ohio Federation of Women's clubs has been designated as the official agency representing the women of Ohio in the relief work.

State Director of Education Vernon M. Reigel reported to the governor that the motion picture interests in Ohio would give screen publicity to the relief campaign immediately. The governor pardoned nine liquor law violators held in the Lorain county jail on condition they place themselves at the disposal of the relief commission and assist in cleaning up the city.

Rail Employee Blamed.

Washington, July 8.—Director Board of the bureau of safety of the interstate commerce commission reported to the commission that the wreck of a Wabash passenger train at Williamsport, Ind., on June 1, which resulted in the death of 13 persons and injury to 48, was caused by failure of a railroad employee to properly lock a switch, which opened as the train passed over it. The report said the switch had been last closed by Head Brakeman Torrance of the Wabash, who later, in response to a question, told Conductor Nelson that it had been properly closed.

Cancer Cure Announced.

London, July 8.—Vice Chancellor J. George Adams of Liverpool university, formerly of McGill university, in a statement declared that research work at the university had reached a stage when it was possible to effect the disappearance of some, if not all, internal cancers.

Drowns in Pool.

Youngstown, O., July 8.—Leroy Emery, Jr., 11, was drowned while swimming in a pool in Yellow Creek park at Struthers. The swimming pool had not been opened to the public.

SCORE ELEVEN POINTS

Americans Defeated in the Olympic 100-Meter Dash.

Paris, July 8.—America lost the 100-meter dash at the Colombes stadium. H. M. Abrahams, former Cambridge university (England) star, dashed the hopes of the United States for a clean sweep in the 100-meter race at the Olympic, when he defeated the four fastest American runners and won the final heat in record time. Jackson V. Scholz, New York A. C. crack, was second, while the New Zealand sprinter, Peritt, took third place. Chester Bowman, Syracuse, who won the final trial at Cambridge, Mass., last month, was fourth, with Charley Paddock fifth and Loren Murchisan sixth. America picked 11 points in this event, where at least 18, with a possibility of 25, had been counted on. Abrahams' 10 points counted for England. His time was 10 3-5.

Finland won two of the three heats in the 3,000 meters steeplechase, placing three men in the finals. The United States got two runners into the finals.

Sleep Returns.

Washington, July 8.—C. Bascom Sleep, secretary to President Coolidge, returned to his desk after an absence of three weeks. "I am back on the job," he said, dispelling rumors that he had quit permanently over a disagreement between himself and William M. Butler, Republican national committee chairman, over the management of the Cleveland convention.

DOHENYS IN COURT

Attack Indictments Against Them in the Oil Cases.

Washington, July 8.—E. L. Doheny and E. L. Doheny, Jr., filed motions in the district supreme court to quash the indictments recently returned against them by the special oil grand jury, charging conspiracy and bribery. They contended the indictments were invalid because of the presence of a department of justice official in the grand jury room during the taking of testimony.

The motion will not be argued until the court reconvenes in October for the fall term. Frank J. Hogan, attorney for the Dohenys, contended that the agent's presence was "contrary to law and subversive of the rights of his clients," because it was the intent of congress to take the prosecution of the cases out of the hands of the department of justice and to that end President Coolidge appointed Atlee Pomerene and Owen J. Roberts as special counsel.

Four Boys Held.

Batavia, O., July 8.—Four suspects, all boys, are held for investigation here. They were found armed when arrested in front of the First National bank in this city. The boys came from Pikeville, Ky.

American Flyers in Persia.

London, July 8.—The American world flyers arrived at Charbar, Persia, from Karachi on their way to Bendar Abbas.

MARKET QUOTATIONS

Lichens Are Descendants of Prehistoric Growth

The world has more than once been startled by reports that a descendant of the monster animals which inhabited the earth before the Ice age has been seen either lifting its head out of the ocean depths or lurking in the darkness of a primeval forest.

Hitherto none of these reports has been confirmed. But when we come to plant life we find in the lichens real prehistoric growths. The lichens we can see and examine today are similar to those which existed tens of thousands of years ago.

The growths which spread themselves over rocks and old walls are a combination of a fungus and countless thousands of algae. The fungus, unable to make its own way in the world, has enmeshed huge numbers of green algal cells, living on the food material which they produce.

That many of these plants are tens of thousands of years old is proved by the fact that by scraping away the crust of lichens the abrasions caused by the passage of ice during the glacial period are as fresh as though they had been made recently. The lichen has protected them from the weather ever since. The Glacial age is said by some scientists to have ended over 80,000 years ago.—London Tit-Bits.

Every Inhabitant of Town Helps Make Muslin

Practically everybody in the little town of Tarare, with its 12,000 inhabitants, in central France, recently referred to in *By the Way*, is interested in the making of muslin. Quite half the population are actual workers in the mills or in their homes, where muslin is either made on household looms or covered with most beautiful embroidery.

Although the population of Tarare has diminished in recent years the muslin industry is still very remunerative, and there are some streets in which one's guide will point to the houses of men who (in France) are multi-millionaires—men of great wealth who continue to live side by side with less fortunate citizens, who "thee" and "thou" their rich neighbors as they pass them in the streets. All these people are ready to admit that they owe their prosperity and livelihood to the work and perseverance of M. Antoine Simonet; but they will also tell one that something is due to the water of the river Turdine, which gives the light cotton materials of Tarare certain incomparable qualities as regards texture and color which are recognized by women the world over.—Detroit News.

Penitentes a Strange Sect

The Penitentes, or Penitent Brothers, were once very numerous in New Mexico. They were Mexicans—very ignorant and fanatic ones.

Their strange brotherhood—a remnant and perversion of the penitent orders of the Middle ages—was active only forty days in the year, the forty days before Lent. At that time they flogged their own naked backs with cruel scourges of aloë fiber, carried enormous crosses, lay on beds of cactus, and performed similar self-tortures, making pilgrimages thus. On Good Friday they redoubled their ghastly efforts, and finally crucified, upon a real cross, one of their number who was chosen by lot.

In the Middle ages nearly the whole of Europe had a strange epidemic—a fever of penitential self-whipping. The Flagellants, as they were called, paraded the streets, lashing themselves with scourges, or used the whip at home. Even kings caught the infection, and abused their own royal backs. It took centuries to eradicate this remarkable custom.—Detroit News.

Lilac Buds Protected

Lilac buds, containing twigs, leaves and blossoms in embryo form are tender and delicate and full of water, yet they are able to survive extremely cold weather in which they are frozen solid and even come unscathed through long periods of alternate freezing and thawing. Examination under the microscope reveals the secret of the extraordinary hardness of these buds. The outer sheath covering the bud is coated with wax, so that the tissues inside are hermetically sealed against outside moisture. Inside are layers of a corky substance which prevents the escape of water from the tissues. Here and there throughout the bud are spaces into which the water expands when it is converted into ice. So long as the outer sheath remains closed and intact freezing and thawing can do no harm whatever.

A Rogues' Gallery

An elderly man of ultra-convivial habits, but withal learned and bookish, was haled before the bar of justice in a country town.

"Ye're charged with bein' drunk and disorderly," snapped the magistrate. "Have ye anything to say why sentence should not be pronounced?"

"Man's inhumanity to man makes countless thousands mourn," began the prisoner in a flight of oratory. "I am not so debased as Poe, so profligate as Byron, so ungrateful as Keats, so intemperate as Burns, so timid as Tennyson, so vulgar as Shakespeare, so—"

"That'll do, that'll do," interrupted the magistrate. "Ninety days. And, officer, take down that list of names he mentioned and round 'em up. I think they're as bad as he is."—American Legion Weekly.

Japanese Bell 1,191 Years Old.

The largest bell in Japan is suspended in the grounds of the grand Jodo temple of Chion-in, at Kyoto. Visitors are not allowed to sound it. It was cast in 1633. It weighs 74 tons and requires, it is said, 24 men to ring it properly. Next in size ranks the bell of the Daibutsu temple in Kyoto, which visitors are allowed to ring on payment of a small sum. It was cast in 1615 and weighs 63 tons. The wonderful bell of Todaiji, at Nara, although ranking only third, is perhaps the most interesting of all the bells in Japan. It is 13 feet 6 inches in diameter, but its inferiority to the Kyoto bells is not in visible dimensions, so much as in weight and thickness. It was cast in 733 and is therefore 1,191 years old, says the Detroit News. Visitors pay a small sum to sound it once.

Villanage.

Villanage was a system of land tenure introduced into England after the Norman Conquest (1066 A. D.) whereby the occupants of the soil were kept in a condition of servitude and were permitted to hold land only on condition of performing menial service for their lord and superior. Such persons were called villeins (of or pertaining to the vill), whence is derived the common English word villan. Villanage, although never formally abolished in England, ceased to exist in the Sixteenth century.

Political Announcement

WILLARD M. JUSTUS
Jackson Township

Democratic Candidate for
County Commissioner
Your efforts in my behalf will be appreciated

Primary Election August 12, 1924.
10 June & wtf.

Lyman McGath, of the Second Ward Circleville, is a candidate for the Democratic nomination for county recorder, subject to the decision of the primary August 12.

Burr H. Rader announces his candidacy for the nomination for county commissioner subject to the decision of the Democratic primaries August 12.
11 June & w2mo.

J. C. Reid, of Jackson township, is a candidate for nomination for county recorder subject to the Democratic primary, August 12.

REPUBLICAN CANDIDATE.

John E. Walters of Circleville township, will be a candidate for nomination for county commissioner in the Republican primaries August 12.

Woman's Sphere in Japan.

"Most servants in Japan can only cook a little rice in plain, hot water," says a Tokyo lawyer. "They know nothing about fixing all the good things that go with the rice. That is why the women of Japan are too busy to get lonely or to need clubs."—Adelaide Lyons in World Outlook.

Harmonica of Glass

One of the most curious musical instruments ever made was the glass harmonica, invented by Benjamin Franklin. It was composed of glass disks of different sizes set on a spindle and made by a treadle to revolve in a trough of water.

A Rogues' Gallery

An elderly man of ultra-convivial habits, but withal learned and bookish, was haled before the bar of justice in a country town.

"Ye're charged with bein' drunk and disorderly," snapped the magistrate. "Have ye anything to say why sentence should not be pronounced?"

"Man's inhumanity to man makes countless thousands mourn," began the prisoner in a flight of oratory. "I am not so debased as Poe, so profligate as Byron, so ungrateful as Keats, so intemperate as Burns, so timid as Tennyson, so vulgar as Shakespeare, so—"

"That'll do, that'll do," interrupted the magistrate. "Ninety days. And, officer, take down that list of names be mentioned and round 'em up. I think they're as bad as he is."—American Legion Weekly.

Japanese Bell 1,101 Years Old.

The largest bell in Japan is suspended in the grounds of the grand Jodo temple of Chion-in, at Kyoto. Visitors are not allowed to sound it. It was cast in 1023. It weighs 74 tons and requires, it is said, 24 men to ring it properly. Next in size ranks the bell of the Daibutsu temple in Kyoto, which visitors are allowed to ring on payment of a small sum. It was cast in 1615 and weighs 63 tons. The wonderful bell of Todaiji, at Nara, although ranking only third, is perhaps the most interesting of all the bells in Japan. It is 13 feet 6 inches in diameter, but its inferiority to the Kyoto bells is not in visible dimensions, so much as in weight and thickness. It was cast in 733 and is therefore 1,191 years old, says the *Detroit News*. Visitors pay a small sum to sound it once.

Villénage.

Villénage was a system of land tenure introduced into England after the Norman Conquest (1066 A. D.) whereby the occupants of the soil were kept in a condition of servitude and were permitted to hold land only on condition of performing menial service for their lord and superior. Such persons were called villeins (of or pertaining to the vill), whence is derived the common English word villan. Villénage, although never formally abolished in England, ceased to exist in the Sixteenth century.

Political Announcement

WILLARD M. JUSTUS Jackson Township Democratic Candidate for County Commissioner Your efforts in my behalf will be appreciated

Primary Election August 12, 1924. 10juned&wtf.

Lyman McGath, of the Second Ward Circleville, is a candidate for the Democratic nomination for county recorder, subject to the decision of the primary August 12.

Burr H. Rader announces his candidacy for the nomination for county commissioner subject to the decision of the Democratic primaries August 12. 11juned&w2mo.

J. C. Reid, of Jackson township, is a candidate for nomination for county recorder subject to the Democratic primary, August 12.

REPUBLICAN CANDIDATE. John E. Walters of Circleville township, will be a candidate for nomination for county commissioner in the Republican primaries August 12.

Woman's Sphere in Japan.

"Most servants in Japan can only cook a little rice in plain, hot water," says a Tokyo lawyer. "They know nothing about fixing all the good things that go with the rice. That is why the women of Japan are too busy to get lonely or to need clubs."—Adelaide Lyons in *World Outlook*.

Harmonica of Glass

One of the most curious musical instruments ever made was the glass harmonica, invented by Benjamin Franklin. It was composed of glass disks of different sizes set on a spindle and made by a treadle to revolve in a trough of water.

Crop Changes Are Found Necessary

Number of Adjustments Have Been Made by Farmers.

(Prepared by the United States Department of Agriculture.)

Although types of farming in the United States are more or less fixed by necessary adaptation to conditions of soil, climate, and markets, they are always undergoing minor changes, and the last few years with the unprecedented disturbances in commodity prices and in production and transportation costs, have brought about an unusual number of readjustments. The United States Department of Agriculture has obtained reports on crop changes in many states, which give some idea of the shake-up in agriculture.

Eastern farmers, with a high freight rate differential in their favor, are considering whether they cannot produce some of the feed which they now buy. In the South the inroads of the boll weevil have compelled some farmers to turn from specialization in cotton to other crops. Flax has been successfully substituted for wheat in a small portion of the spring wheat region.

For many farmers flax is a highly attractive crop as a substitute for part of their wheat. This was demonstrated by the cash returns from the 1922 crops, which were high for flax and low for wheat. As a result, flax acreage this year was increased to 2,300,000 acres from 1,300,000 acres in 1922. The present flax acreage is the largest since 1913. Yet home production will probably not supply half the home demand. We have imported flax every year since 1909. Under the present tariff of 40 cents a bushel, it is likely flax acreage will increase still more.

There has been a big increase in the number of sheep in the United States in the last two years, under the stimulus of tariff protection and an active demand for wool. Two-thirds of our sheep are raised on the range and one-third on the farms. Many farmers who already have sheep can no doubt increase their flocks with profit, say live stock experts in the Department of Agriculture. Others, it is said, could profitably add sheep to the live stock enterprises.

Sheep Raising Profitable.
In the last year the farm price of sheep has risen from \$4.80 to \$7.50 a head; the farm price of wool has increased from an average of 20 cents a pound in 1922 to 35 cents. These advances have been a boon to many farmers whose major crops have not brought good prices. Further expansion of the sheep industry probably would be profitable.

Farmers in the semi-arid regions, especially in western North Dakota and eastern Montana, are finding that it pays them to grow corn on land which they have been accustomed to summer-fallow. With only a small additional amount of labor required for planting and cultivating, they are growing a feed crop which helps them to broaden their live stock production. Experts of the Department of Agriculture say that farmers in these areas who have enough live stock should plant as much corn as they can conveniently handle.

If the present price of corn continues, it is believed it will be profitable to increase the corn acreage in most of the corn belt. In 1922 the spread in Ohio between the value of an acre of corn and that of an acre of wheat was wider than in any year since 1913. An acre of corn in Ohio this year promises to be worth nearly twice as much as an acre of wheat or oats. In Chester county, Pa., the average value of an acre of corn giving the normal yield of 65 bushels at 70 cents a bushel would be \$45, while the value of an acre of wheat yielding 25 bushels at 85 cents would be only \$21. While this relation exists farmers naturally have a strong motive to reduce their wheat acreage and keep their corn acreage up to the highest point consistent with a balanced labor program and the maintenance of soil fertility.

Wheat acreage has been cut down throughout the country since 1919 except in parts of the Northwest states, which are practically a one-crop area. The location and size of farms in this one-crop territory often prevent any fundamental change in the type of farming. Yet farmers are introducing milk cows on their farms, or increasing the number already owned. Some have been successful with hogs and poultry. A combination of wheat, corn and live stock has been tried on some farms with good results.

Farming conditions are more hazardous in the Montana triangle than in any other part of the spring-wheat area. Many of the "dry" farms in the territory have been abandoned. Some of the farmers who have stayed are trying mixed farming. Government experts believe there are prospects of success in some localities.

Farmers Overlook Opportunities.

Farmers in some parts of the country are overlooking opportunities to make money, in the opinion of department experts. Investigators who recently studied conditions around Altoona, Pa., found that the city shipped 92 per cent of all the potatoes it consumed in 1922. Blair county, in which the city is located, is a good potato-growing area. Farmers there might increase their production greatly and still have the advantage of a first-class local market. Most of the Blair county farmers are dairymen. Probably dairying is on the whole a more profitable occupation for them

than potato growing. Since, however, potatoes can apparently be shipped in from distant states at a profit, and since a few more acres of potatoes could be raised on Blair county farms without increasing the strain on local markets, the farmers could make money in potato production.

In the Yakima valley, Washington, potato growers are working on plans to prevent a recurrence of losses suffered in the last few years from lack of a readily accessible market. Probably the Yakima valley produces larger yields of potatoes of the highest grade than any other area in the country. The Yakima reclamation projects in 1922 produced an average of 260 bushels an acre on the 8,442 acres harvested. Yet the growers lost money, and a large part of the crop had to be dumped back on the fields.

To reduce such losses in the future, new plans for marketing the choicest grade of potatoes are under consideration. It is proposed to grade and sort the potatoes, wrap each one in paper, and pack them in small boxes for shipment by the Panama canal to Eastern markets. Potatoes thus packed, it is figured, could be laid down in New York at a cost of transportation of \$1.25 a hundred pounds, and would command premium prices. High rail rates have shut out Yakima potatoes from some formerly profitable markets, and a way to overcome this handicap is urgently required.

Why beat a year's wear out of your rugs; send them to Barnhill's have them thoroughly cleaned and colors returned bright and new. Call

Gigantic Lumber Rafts.

To compete successfully with the high-priced timber of the Southwest, a resourceful log importer of San Diego has, it is reported, adopted an ingenious method of shipping lumber from Oregon to southern California. Gigantic rafts are made of the logs and they are towed down the Pacific coast behind small steamers. The rafts are cigar-shaped and average 700 feet in length, 30 feet in depth and 70 feet across. Two-thirds of the raft is under water. The chains on a single raft weigh 115 tons and cost \$10,000. The first seagoing log boom made its 1,000-mile trip twelve years ago, and since then more than sixty of the huge rafts have followed that course.

HERRICK REFRIGERATORS

The Big Difference In Refrigerators

The main object of any refrigerator, of course, is the preservation of foods. The refrigerator that will keep foods in perfect condition longest is naturally the refrigerator you want—provided it doesn't increase your ice bills.

The Herrick answers those requirements with facts—not claims. And it does even more. It actually decreases your ice bills while giving you more effective food preservation.

And why? Simply because the Herrick is far more than an ice box—far more than a cold storage place. It is built on the scientifically demonstrated principle that more than merely cold air is necessary to keep foods in good condition for any great length of time.

Perhaps the biggest essentials to scientifically correct refrigeration are—

- No. 1. Circulation of cold dry air.
- No. 2. Effective Insulation.
- No. 3. Air-tight construction.

That the Herrick has these necessary essentials is a demonstrated fact.

Many proofs of the truth are visible even to the least informed purchaser. Others are hidden within the walls of the refrigerator, but nevertheless there, performing their functions so important to good health and economy.

Crop Changes Are Found Necessary

Changes of Number of Adjustments Have Been Made by Farmers.

(Prepared by the United States Department of Agriculture.)
Although types of farming in the United States are more or less fixed by necessary adaptation to conditions of soil, climate, and markets, they are always undergoing minor changes, and the last few years with the unprecedented disturbances in commodity prices and in production and transportation costs, have brought about an unusual number of readjustments. The United States Department of Agriculture has obtained reports on crop changes in many states, which give some idea of the shake-up in agriculture.

Eastern farmers, with a high freight rate differential in their favor, are considering whether they cannot produce some of the feed which they now buy. In the South the inroads of the boll weevil have compelled some farmers to turn from specialization in cotton to other crops. Flax has been successfully substituted for wheat in a small portion of the spring wheat region.

For many farmers flax is a highly attractive crop as a substitute for part of their wheat. This was demonstrated by the cash returns from the 1922 crops, which were high for flax and low for wheat. As a result, flax acreage this year was increased to 2,300,000 acres from 1,300,000 acres in 1922. The present flax acreage is the largest since 1913. Yet home production will probably not supply half the home demand. We have imported flax every year since 1909. Under the present tariff of 40 cents a bushel, it is likely flax acreage will increase still more.

There has been a big increase in the number of sheep in the United States in the last two years, under the stimulus of tariff protection and an active demand for wool. Two-thirds of our sheep are raised on the range and one-third on the farms. Many farmers who already have sheep can no doubt increase their flocks with profit, say live stock experts in the Department of Agriculture. Others, it is said, could profitably add sheep to the live stock enterprises.

Sheep Raising Profitable.
In the last year the farm price of sheep has risen from \$4.80 to \$7.50 a head; the farm price of wool has increased from an average of 20 cents a pound in 1922 to 38 cents. These advances have been a boon to many farmers whose major crops have not brought good prices. Further expansion of the sheep industry probably would be profitable.

Farmers in the semi-arid regions, especially in western North Dakota and eastern Montana, are finding that it pays them to grow corn on land which they have been accustomed to summer-fallow. With only a small additional amount of labor required for planting and cultivating, they are growing a feed crop which helps them to broaden their live stock production. Experts of the Department of Agriculture say that farmers in these areas who have enough live stock should plant as much corn as they can conveniently handle.

If the present price of corn continues, it is believed it will be profitable to increase the corn acreage in most of the corn belt. In 1922 the spread in Ohio between the value of an acre of corn and that of an acre of wheat was wider than in any year since 1913. An acre of corn in Ohio this year promises to be worth nearly twice as much as an acre of wheat or oats. In Chester county, Pa., the average value of an acre of corn giving the normal yield of 65 bushels at 70 cents a bushel would be \$45, while the value of an acre of wheat yielding 25 bushels at 85 cents would be only \$21. While this relation exists farmers naturally have a strong motive to reduce their wheat acreage and keep their corn acreage up to the highest point consistent with a balanced labor program and the maintenance of soil fertility.

Wheat acreage has been cut down throughout the country since 1919 except in parts of the Northwest states, which are practically a one-crop area. The location and size of farms in this one-crop territory often prevent any fundamental change in the type of farming. Yet farmers are introducing milk cows on their farms, or increasing the number already owned. Some have been successful with hogs and poultry. A combination of wheat, corn and live stock has been tried on some farms with good results.

Farming conditions are more hazardous in the Montana triangle than in any other part of the spring-wheat area. Many of the "dry" farms in the territory have been abandoned. Some of the farmers who have stayed are trying mixed farming. Government experts believe there are prospects of success in some localities.

Farmers Overlook Opportunities.
Farmers in some parts of the country are overlooking opportunities to make money, in the opinion of department experts. Investigators who recently studied conditions around Altoona, Pa., found that the city shipped 92 per cent of all the potatoes consumed in 1922. Blair county, in which the city is located, is a good potato-growing area. Farmers there might increase their production greatly and still have the advantage of a first-class local market. Most of the Blair county farmers are dairymen. Probably dairying is on the whole a more profitable occupation for them

than potato growing. Since, however, potatoes can apparently be shipped in from distant states at a profit, and since a few more acres of potatoes could be raised in Blair county, it is without doubt in the interest of Blair county farmers to increase production.

In the Yakima valley, Washington, potato growers are working on plans to prevent a repetition of losses suffered in the last few years from lack of a readily accessible market. Probably the Yakima valley produces larger yields of potatoes of the highest grade than any other area in the country. The Yakima reclamation projects in 1922 produced an average of 200 bushels an acre on the 8,442 acres harvested. Yet the growers lost money, and a large part of the crop had to be dumped back on the fields.

To reduce such losses in the future, new plans for marketing the choicest grade of potatoes are under consideration. It is proposed to grade and sort the potatoes, wrap each one in paper, and pack them in small boxes for shipment by the Panama canal to Eastern markets. Potatoes thus packed, it is figured, could be laid down in New York at a cost of transportation of \$1.25 a hundred pounds, and would command premium prices. High rail rates have shut out Yakima potatoes from some formerly profitable markets, and a way to overcome this handicap is urgently required.

Meeting Held in New Holland Thursday of Last Week.

Reports have been circulated that there was a meeting of the K. K. K. held at the Crites canning factory last Thursday evening and that quite a number of Knights of this community were in attendance.

About nine o'clock a fiery cross broke into flames and attracted much attention in the neighborhood of the eastend. This is the first meeting reported in this community for several months.

Just what the meeting was held for is not known but some have gone so far as to guess it was in the interests of the Democratic convention and the coming elections.

Another demonstration took place Wednesday night, when a life and drum corps and a small contingent representing the K. K. K. paraded local streets, advertising a Pickaway county all day picnic to be held near Circleville, this Fourth of July.—New Holland Leader.

Allow Plenty of Room for Convenient Cellar

A convenient cellar for average farm conditions is one of four cars' capacity. A cellar 20 feet wide, 32 feet long and walls 8 feet high will provide sufficient room for the storage of four cars of produce with a four-foot alleyway through the middle in which to work.

A cellar of ten cars' capacity or more should be provided with a driveway lengthwise through the middle, having a double door at each end. Such a driveway is of great convenience in hauling in and out of the cellar and may be used at various times as a space for grading, sorting and packing. The plan of a large cellar should allow a drive 8 feet wide, with spaces 12 feet wide on each side for storage bins. The maximum width for convenience is about 32 feet. The length will vary according to the desired capacity.—Extension Service, Colorado Agricultural College.

RESIDENCE PROPERTY FOR SALE

Six room frame dwelling with bath, furnace and a garage equipped with electric lights and gas; also hardwood floors down stairs. This is a nice, cozy home, located on a paved street offered at a bargain if sold at once.

Sevres Blue.

For a long time it was believed that the famous blue color given to the porcelain manufactured at Sevres, in France, was the result of a secret process and there were many legends in regard thereto. It has been proved, however, that it is an error to suppose that Sevres blue cannot be produced elsewhere. As a matter of fact, it is produced in many French potteries where sufficient care is taken and where pure oxide of cobalt is employed. Formerly it was difficult to procure this article free from certain impurities that injured the color, but chemical science has overcome all the difficulties. The same is true of the Chinese green known as celadon. It was invented in China, but it can be perfectly reproduced elsewhere.

Sincerity.

To every poet, to every writer, we might say: Be true, if you would be believed. Let a man but speak forth with genuine earnestness the thought, the emotion, the actual condition of his own heart; and other men, so strangely are we all knit together by the tie of sympathy, must and will give heed to him. In culture, in extent of view, we may stand above the speaker, or below him; but in either case, his words, if they are earnest and sincere, will find some response within us; for in spite of all casual varieties in outward rank or inward, as face answers to face, so does the heart of man to man.—Thomas Carlyle.

What Became of Apples?

A Victoria story that has recently been exhumed concerns a Montreal man who sent several barrels of Canadian apples to Queen Victoria, Gladstone, Lord Dufferin and General Wolseley. He received letters of acceptance from all except the queen, whose secretary wrote: "Her majesty commands me to say that she fully appreciates your kindness in sending the apples, but it is a rule that favors of this nature shall not be accepted. However, on account of their perishable nature, the apples cannot be returned." What became of them was not explained.

Love Letters Left in Library.

While the public library of any great city is more or less a trusting place, it remained for the Providence (R. I.) Public library to announce that its lost and found department is literally cluttered up with forgotten love letters left in books and in the reading rooms. The greater number are left between the pages of books that have been returned. The love letters vie with money and German marks, however, as forgotten book marks. Dozens of men's hats are left each year, though never has a woman's hat been left behind.

Yes, Why Not?

"If the world's chemists and the world's engineers would hold annual meetings in a friendly spirit, for the salvation of mankind! If they could agree together that to exercise their ingenuity on the perfecting of destructive agents for the use of governments was a crime; to take money for it a betrayal of their species! If we could have such exchange of international thought as that, then indeed we might hear the rustle of salvation's wings. And—after all—why not?"—John Galsworthy.

Pacific Salmon.

The Pacific salmon's love of home may be used to naturalize this valuable food fish in distant foreign waters. Dr. Meyer Gurewitz of the bureau of science of Palestine has hopes of transplanting salmon from our Pacific coast to the Mediterranean sea. Salmon come back to spawn in the same stream in which they were hatched. By transplanting the eggs, however, this homing instinct may be used to establish the fish far from home.

Origin of Victoria Cross.

The Victoria Cross, given for conspicuous bravery, was instituted in 1856 on the close of the Crimean war, and was given to citizens who had borne arms against the Indian mutineers. In 1911 the decoration was extended to the Indian army. A bar may be awarded for an additional act of bravery. With the decoration is a pension for noncommissioned officers and men of ten pounds a year, with an addition of five pounds for each bar.

Goldbeater's Skin.

Gold was first hammered between parchment leaves until the mold, termed goldbeaters' skin, was invented. This skin is made from a membrane of the ox and the secret of its making is kept by a family in London which has made the membrane for three generations. Three months are consumed in the treatment of the membrane and it may be beaten continuously for months with a 16-pound hammer without material injury.

Unite to Save Game.

Eleven countries have been invited to have their leading organizations unite on saving game birds. Ten have already formally accepted, says Nature Magazine. These are Australia, Canada, France, Holland, Norway, Luxemburg, Switzerland, Italy, Great Britain, and the United States. Each organization has appointed two members to serve on the international committee.

Never at Right Time.

Mother—"No, Bobby, for the third time, you can't have another chocolate." Bobby (in despair)—"I don't see where father gets the idea that you are always changing your mind."

MRS. MARY MINEAR DUNLAP

ANSWERS LAST SUMMONS.

Mother of Samuel W. Dunlap Died in Ross County in Her One Hundred and Seventh Year---Had Remarkable Memory and Could Recite Events of Nearly a Century Ago---Playmates Were Shawnee Indians.

Mrs. Mary Minear Dunlap, the oldest resident of this part of the United States, and the mother of Samuel W. Dunlap, of this city, died Monday forenoon at eleven o'clock at the home of her son, Charles Dunlap, in South Union township, Ross county, in her 107th year.

The Chillicothe News Advertiser says:

"The beloved centurian was just entering her 107th year having passed the 106th milestone last May 26. While beyond the limit of ordinary life, the news of her death was a distinct shock to many.

"Mrs. Dunlap, who was born in the year of 1818 was not only Chillicothe's oldest resident but Ohio's and surrounding states as well. She was born, one of ten children in a small cabin, three miles north of this city. Her father's name was Philip Minear and her mother's maiden name was McCollister. Here she lived until 1840 when she married and moved to Urbana road where she and her husband began housekeeping. Later they moved again, taking up their residence along the great waterway of those days, the Ohio & Erie canal.

"In 1879 her husband died and ten years later Mrs. Mary Dunlap moved to Chillicothe. Up until several years ago the venerable old woman had never suffered from any sickness and it had only in the past year that she had felt the pains and aches that accompany the mounting years.

"Mrs. Dunlap's memory had always been remarkable and with ease she could recite the events that took place nearly a century ago. She delighted to relate her experiences as a girl when just a child she had as her playmates the children of the Shawnee Indian tribe.

"The deceased was a life long member of the Methodist church, a loving mother, a kind neighbor and will be greatly missed in her community.

"Four sons, Samuel, of Circleville; Nelson, of Kingston; James, at Daytona, Florida; and Charles, of this city together with seventeen grandchildren nineteen great-grandchildren and one great-great-grandchild are left to mourn their loss."

AUTO HIT BUGGY

C. E. Roof and Miss Jane Sweetman Badly Hurt on North Court Street.

At 3:10 o'clock Monday afternoon as C. E. Roof and Miss Jane Sweetman were in a buggy driving to Forest cemetery a Ford touring car driven by Turney Phillips, of East Ringgold, going in the same direction, dashed into the buggy turning it over and spilled the occupants of the vehicle on the street. Mr. Roof's left ear was nearly torn off and he received severe bruises on the elbow, hip and the top of his head and also on his face. Miss Sweetman's left shoulder was badly wrenched and bruised. She was taken into the home of Jacob Young near where the accident occurred and Dr. Howard Jones was called and attended to the injured. The buggy was badly wrecked.

Building Steel Vessels

More than 200 steel vessels are being built for private shipowners in American shipyards.

FOR SALE.

Amicon brick block, consisting of two good store rooms with flat over both rooms with a frontage of 60 feet and a depth of 130 feet with an income 10% net; located, corner Main and Western avenue; this is ideal location for an oil station or a small factory. Besides the above building I have a small stove, safe, desk and wood partitions suitable for an office or store. For further information call CIRCLE REALTY CO.

AMUSEMENTS

George Melford's latest Paramount picture production, "Flaming Barriers" scored a knockout on its initial presentation at the Met theater last night. Jacqueline Logan, Antonio Moreno and Walter Hiers, the featured members of an unusually clever cast, achieved personal triumphs by reason of their artistry in what was declared to be one of the most dramatic pictures shown here thus far this season.

Sam Barton, a better golfer than an efficiency expert, takes charge of the "airs at the large automobile machine shop of Patrick Malone in Burbridge. He becomes deeply interested in old Malone's latest invention, a fast automobile fire truck, but more so in Malone's beautiful daughter, Jerry.

At a convention of fire chiefs Jerry exhibits the truck to such excellent advantage that they recommend its purchase to their respective cities—Jerry's chance to show off the apparatus coming when the dense forest where the convention is being held catches fire and endangers hundreds of lives. The girl goes to Burbridge after the truck in an aeroplane and drives the engine to the scene of the conflagration at high speed. Intense realism characterizes the ensuing scenes of this rapid-fire story, one of the best screened in a long time.

Jacqueline Logan and Antonio Moreno share individual acting honors while Walter Hiers gives an exceptionally clever characterization. Chas. Ogle is convincing as Patrick Malone, the inventor. Robert McKim, Luke Cosgrove and Warren Rogers are among the more prominent players in the strong supporting cast.

Read the want ads in this issue.

YEGGMEN

Blew Safe of Pure Oil Company in Chillicothe Sunday.

The safe of the Pure Oil company's office, corner Second and Sugar street, Chillicothe, was blown early Sunday morning. The yeggman placed too much "soup" in the soap funnel, so the police say, and misjudged the strength of the safe. The nitro-glycerine not only blew the safe door off, but blew out the contents of the safe as nearly \$900 in checks and \$50 in currency were blown about the office and the currency was torn to shreds. The burglary was not discovered until late Sunday morning. Some people in the neighborhood of the office heard a slight noise early in the morning. Nothing was heard by the police department until the matter was reported.

* SOCIAL CALENDAR *

Mrs. Glenn I. Nickerson will entertain a dinner bridge party Wednesday evening.

Mrs. Turney Weldon will entertain her club at the home of her mother, Mrs. Charles F. Weaver, Wednesday afternoon.

Mrs. J. W. Baldwin entertained her bridge club Tuesday evening.

Fined \$750.

William East, charged with possession, selling and transporting liquor appeared before Judge Adkins in probate court Tuesday and was given a fine of \$750 and costs for selling intoxicating liquor. The other charges were held in abeyance. Abernethy & Simkins represented the defendant and Meeker Terwilliger the state.

Adjudged Insane.

Mrs. Jane Cave was adjudged insane by the probate court Monday. It is thought that she will be committed to the Columbus hospital.

Appointed Administrator.

George P. Hunsicker has been appointed administrator of the estate of Lorenzo D. Williams, deceased. The estate is estimated to be worth \$15,000 of which \$1,500 is real. Mr. Williams was burned in the Central Oil company's explosion at Columbus, from the effects of which he died.

FINED \$500.

George Anderson was fined \$500 and costs by Judge Adkins in probate court Monday on the charge of illegal possession of intoxicating liquor.

K. K. K.

Meeting Held in New Holland Thursday of Last Week.

Reports have been circulated that there was a meeting of the K. K. K. held at the Crites canning factory last Thursday evening and that quite a number of Knights of this community were in attendance.

About nine o'clock a fiery cross broke into flames and attracted much attention in the neighborhood of the east end. This is the first meeting reported in this community for several months.

Just what the meeting was held for is not known but some have gone so far as to guess it was in the interests of the Democratic convention and the coming elections.

Another demonstration took place Wednesday night, when a file and drum corps and a small contingent representing the K. K. K. paraded local streets, advertising a Pickaway county all day picnic to be held near Circleville, this Fourth of July.—New Holland Leader.

Allow Plenty of Room for Convenient Cellar

A convenient cellar for average farm conditions is one of four cars' capacity. A cellar 20 feet wide, 32 feet long and walls 8 feet high will provide sufficient room for the storage of four cars of produce with a four-foot alleyway through the middle in which to work.

A cellar of ten cars' capacity or more should be provided with a driveway lengthwise through the middle, having a double door at each end. Such a driveway is of great convenience in hauling in and out of the cellar and may be used at various times as a space for grading, sorting and packing. The plan of a large cellar should allow a drive 8 feet wide, with spaces 12 feet wide on each side for storage bins. The maximum width for convenience is about 32 feet. The length will vary according to the desired capacity.—Extension Service, Colorado Agricultural College.

RESIDENCE PROPERTY FOR SALE

Six room frame dwelling with bath, furnace and a garage equipped with electric lights and gas; also hardwood floors down stairs. This is a nice, cozy home, located on a paved street offered at a bargain if sold at once.

Fined \$750.

William East, charged with possession, selling and transporting liquor appeared before Judge Adkins in probate court Tuesday and was given a fine of \$750 and costs for selling intoxicating liquor. The other charges were held in abeyance. Abernethy & Sinkins represented the defendant and Meeker Terwilliger the state.

Adjudged Insane.

Mrs. Jane Cave was adjudged insane by the probate court Monday. It is thought that she will be committed to the Columbus hospital.

Appointed Administrator.

George P. Hunsicker has been appointed administrator of the estate of Lorenzo D. Williams, deceased. The estate is estimated to be worth \$15,000 of which \$1,500 is real. Mr. Williams was burned in the Central Oil company's explosion at Columbus, from the effects of which he died.

FINED \$500.

George Anderson was fined \$500 and costs by Judge Adkins in probate court Monday on the charge of illegal possession of intoxicating liquor.

AUTOMATIC OIL FEED FOR AUTO

May Be Used on Any Engine Where Level Must Be Kept at Predetermined Height.

This automatic oil feed, while illustrated and described as applied to a light car, may be used on any engine where the oil level must be kept at a predetermined height.

A hole is drilled into the crankcase at about one-quarter inch below the point at which the oil level is to be held; this is tapped one-eighth-inch pipe-size, and a compression coupling for three-sixteenth-inch (outside diameter) copper tubing screwed in firmly. The lower petcock is removed, and screwed into a one-eighth-inch tee, which is connected to the crankcase with a nipple; a compression coupling is then screwed into the side outlet of the tee.

A tank of about one-gallon capacity, made of sheet iron, and with all joints brazed, is then strapped to the dash; this tank may be a gallon oil can, but the constant vibration will chafe holes in it after about six months' use, so it is better to use a specially made tank; in any event, the tank must be provided with a screw cap, fitted with a

A Simple and Efficient Automatic Oil-feeding System for the Light Car.

gasket, so that it will be airtight. The tubes are then soldered or brazed to the tank as shown in the drawing, and the tank filled with oil.

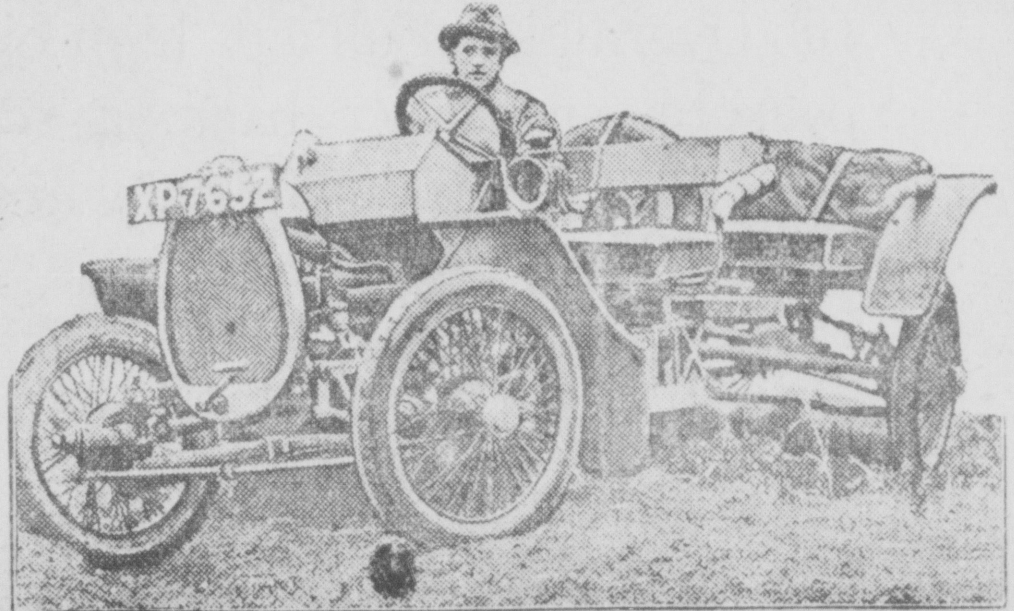

The oil will flow out of the tank into the crankcase until the oil level reaches the upper tube opening. When it covers the tube no more air can get up to the tank, and the oil ceases to flow. As soon as sufficient oil has been used to uncover the end of the upper tube again, a bubble of air passes up the tube, and a corresponding quantity of oil comes down the other tube. This continues automatically until the oil in the tank is used up. The system may be improved by the addition of a float gauge, which may be purchased anywhere; when the gauge shows the least drop in height, it indicates that the tank is empty.

This system has been in use for over a year, and I would not be without it, as it eliminates much of the time spent in "oiling up."—John A. Blaker, West Auburn, Mass., in Popular Mechanics Magazine.

Right Plan to Keep Tires Well Inflated

A tire will be less durable and of shorter life if used underinflated because of the friction and loosening effect upon it caused by the tire bending farther at its flexing points than is intended. This increased bending, particularly at the tire's side walls, will tend to loosen the rubber from the fabric beneath, and may even separate the various layers of fabric if underinflation is continued. Also there are more chances of the tire being punctured, as a wider surface is in contact with the road.

AUTOMOBILE "GOES ON ALL FOURS"

Able to turn in its own length, to negotiate roads too rough for ordinary cars, and climb steep hills—this new English automobile "goes on all fours." It has not merely the now popular four-wheel braking, but has four-wheel drive and four-wheel steering.

Things We Used to Do

You had to tip the body over sideways when you wanted to get at the engine on an automobile.

You entered the tonneau by way of a door on the rear of cars.

You stopped several times on a short trip and shut off your engine to allow drivers of horses to get past without having a run-away.

You did not have any driver's licenses or numbers on cars.

All tires were changed on the road and pumped up by hand.

Tops, windshields and head lights had to be bought extra.

Gasoline sold at retail for nine cents a gallon.

Cars were only used in the summer time.

One-cylinder cars were popular.

Cars cranked on the side.

There were no traffic cops.

If you made a trip to Bridgeport and returned and did not have engine or tire trouble, you were not believed upon your return.

Cars steered with a handle instead of a wheel.—New Haven Register.

Tires Are Injured by Garage Greases

It is pretty generally known that gasoline, grease, oil and other fatty substances are solvents of rubber.

If garage floors are not kept clean and tires stand in a pool of oil, the tread softens and the traction strains in service stretch the rubber in a wavy outline, eventually causing it to separate from the fabric body underneath, says Popular Science Monthly.

Probably the most damage is experienced from grease in the differential housing working out into the brake drums and then onto the side walls of the tires. This may result from loose bearings, too much grease or from using grease not suitable for differential.

Grease and oil may be very easily removed by using a rag saturated in gasoline. Gasoline, although a solvent, evaporates quickly, and, if applied in small quantities, will not cause any injury when used as a cleaning agent.

Ordinary injuries to the rubber cover do not prevent successful repairs, but not often can work be well done when materials have been affected by oil or grease. Invariably blistering during vulcanization results.

AUTOMOBILE NOTES

Have the mud bolts cleaned out and repaired at once.

A cotter pin can be worked into a hole much easier if one end of the pin is shortened.

The automobile takes its name from the Greek "autos," self, and the Latin "mobilis," movable.

Clutch trouble can be avoided if oil is administered to the throw-out collar on the clutch at least once a week.

Any hard substance, such as grit, metal chips, etc., will render a perfect bearing useless in a very short while.

An automatic shaft lock has been invented which prevents an automobile running backward on grades unless its owner wishes to do so.

ARMENIANS

Millions Today Owe Their Lives to the Generosity of America.

The Near East Relief campaign which opens here Wednesday deserves the hearty support of every man and woman in Circleville. We have read in the daily papers report after report of the sufferings and hardships of the Christian people in the Bible lands until it has seemed to us as tho there could be no people left to suffer any more, that all of them must be dead. There is only one reason that all of them are not dead. It is not too much to say that had it not been for American help thru the Near East Relief there would no longer be any Near East problem. America, it is true, declined the mandate for Armenia but more than a million Armenians today owe their lives and whatever hope for the future they may have to American generosity.

The need still goes on. Near East Relief has in its care some hundred and ten thousand orphan children, whose parents were the victims of massacre or famine and whose only hope of continued life lies in American help. We cannot abandon these children until they are fitted to care for and support themselves. To do so would be a worse crime than never to have aided them at all. Their confidence in us is unshaken and supreme and we are not going to fail them.

Bring your bundle to the city building tomorrow and remember Tag Day or Saturday next.

PERSONALS

Mrs. E. L. Price was a visitor in Columbus today.

Max Friedman was a business visitor in Columbus today.

Mrs. Martha Wood, of Williamsport, spent the day in Columbus.

Harry S. Lewis left today for Detroit, Michigan, on a business trip.

J. H. Lutz and W. S. Gearhart were business visitors in Columbus today.

Mr. and Mrs. Walter Rice, of Akron are guests of Charles Eaton, and family.

Miss Ora Kocher, of Stoutsville, left today for West Salem to visit relatives.

Misses Jessie and Minnie Van-Sickle, of Cedar Hill, spent the day in Columbus.

A. B. McHorter, of Columbus, who has been visiting at his old home in Tarlton, has returned home.

Miss Mercedea Mason, of Columbus was the weekend guest of her parents, Mr. and Mrs. W. H. Mason.

Miss Martha Trimble, of Columbus, spent Sunday with her mother, Mrs. Mary A. Trimble, of Pinkney street.

J. A. Todd, of Columbus, who has been visiting the family of Clinton Estep of near this city, has returned home.

Miss Ruth Jackson, of New York City, is visiting Mr. and Mrs. George Pressler and Mr. and Mrs. Fred Donnelly.

Miss Bertha Allen, of New York City, will arrive home today for a visit with her parents, Dr. and Mrs. H. C. Allen.

J. A. Todd, of Columbus, who has been visiting the family of Clinton Estep of near this city, has returned home.

Miss Ruth Jackson, of New York City, is visiting Mr. and Mrs. George Pressler and Mr. and Mrs. Fred Donnelly.

Miss Bertha Allen, of New York City, will arrive home today for a visit with her parents, Dr. and Mrs. H. C. Allen.

Mrs. Ray Schneider and little son, Raymond Jr., of Columbus, are visiting her brother, John I. McKenzie, and family of South Scioto street.

Mrs. Lemuel B. James, Misses Mary and Harriet Marfield, Miss Adaline Weldon and Miss Bess Frey were visitors in Granville Tuesday.

Dr. and Mrs. C. O. Allen and daughter, Miss Nellie, of Logan, were the guests Monday of Dr. and Mrs. H. C. Allen. Miss Allen remained for a visit.

Miss Isabel Hayes, of Springfield, who has been the guest of Mr. and Mrs. Harp Van Riper has left for her home. She will spend several days in Columbus visiting friends.

Mrs. Fred B. Brunner and son, Thomas, and her daughter, Mrs. Harold Eveland, and Mrs. Samuel B. Orr, left Monday on a motor trip to Niagara Falls and other points in the lake country.

Frank Hamilton and M. C. Seyfert left Saturday for Boston, Massachusetts, to attend a meeting of the grand lodge of Elks. They left on the John G. Price special from Columbus and will visit points on the St. Lawrence in Canada, before returning home.

Mr. and Mrs. Paul Bossert and daughter, Deloris, Mr. and Mrs. Melvin Bossert and son, Norman of Oakmont, Pennsylvania, who have been the guests since the Fourth of Mr. and Mrs. John Wertman and Mr. and Mrs. Chester Wertman, of North Pickaway street, have returned home.

IT PAYS TO ADVERTISE

93d BALLOT.

Not much change is shown in the balloting in the New York convention since last night.

The 93d ballot was McAdoo, 314; Smith 355 1/2; Davis, 68; Underwood, 44 1/4; Glass, 27; Robinson, 19; Ralston, 196 1/4; Ritchie, 16 1/2; Walsh, 4; Bryan, 8; Saulsbury, 6; Baker, 2; Cummings, 8 1/4; Meredith, 26.

The convention adjourned to nine o'clock this evening when the delegates will meet in executive session and try to reach an agreement on a candidate for the presidency.

AGENTS TAKING VACATION.

Mr. and Mrs. John H. Drum leave for Zanesville today to visit her sister Mrs. J. H. Nesbit, and family, and will remain for several weeks visiting other relatives. W. B. O'Hara and Andrew White, of Columbus, will hold down the work at the traction station until their return.

HELPING LORAIN

The American Legion Auxiliary sent a box of clothing and \$10 to the Lorain storm sufferers.

BUSINESS OPPORTUNITY.

We have a big opportunity for a man in this county to start a business of his own. A chance for a live wire with a little sales ability to clean up on the fall business. Use your home for an office. See F. A. Curtis, American Hotel, Circleville, between 2 and 4 Thursday, July tenth. \$July2.

EASTERN STAR.

The regular meeting of Circleville chapter, Order of the Eastern Star, will be held Tuesday evening at 7:30 o'clock. A class of candidates will be initiated and all members are urged to attend. 7July2.

16 TO 1.

We give \$16 in Aer-O-Plane Bonds for each \$1 paid on subscription to either Daily or Weekly Union-Herald.

REMEMBER

WE DO THE BEST CLEANING AND PRESSING IN TOWN.

KEEPING BREAD FRESH
is merely a matter of taking two precautions: First, that it is kept in a suitable container, especially after being cut, and Secondly, that you Buy CREAM CRUM BREAD.

A little experimentation will prove to you that the properties inherent in CREAM CRUM BREAD really DO enable it to keep moist and fresh longer than other bread.

— Your Grocer has it. —

WHAT HER HOME MEANT TO JANE

By EDITH L. HOSMER

"WHAT!" exclaimed Daddy Edwards, as Jane came flying the stairs in a gay little gown. "Not going out tonight?" There was a shade of wistfulness in his voice.

"Well, you see, er, Johnny"—began the girl in a hurried, confused way.

"Yes," interrupted her father, laughing, "we see Johnny quite often nowadays—have for some time. Before John it was Bob, and before Bob it was—"

Oh, father! Don't!" cried Jane.

"Well, when is it my turn for a date? You never have time for your old dad now. Junior and Ellenor have to be in bed so early, and sometimes your mother and I would like to have your company. Like to hear our girl at the old piano again."

"Them days is gone forever," quoted Ellenor, smiling wisely. "I'll play for you, daddy, on the graphophone."

"As far as Jane is concerned, I might as well be running a boarding house," put in mother, smiling a strange little smile at Jane. "She's only home to sleep and for some of her meals."

"Oh, folks!" Jane sighed heavily. "Just staying home—what fun is there in that? You don't want me to miss the fun of life, do you?"

"I wonder," murmured Daddy Edwards, as he went out of the room. "I wonder if, after all, you aren't missing something?"

Jane shrugged her shoulders, indicating that she had failed to see the point. She failed, also, to notice the canary singing in his cage, which swung high in the bay window that was filled with plants. She failed to notice the puppy who was having a glorious time with old Tabby's tail. She failed utterly to see that in the family circle there was a place for her which was continually vacant.

It was not a luxurious home. There were no servants flitting about. Oh, no, it was just a middle-class home, neat and comfortable, but it was home. She thought she knew! Sweet, impulsive, merry-faced Jane—Jane who was wise with the wisdom of twenty-one years crammed in her little blonde head.

She knew one thing very well, and that was that Johnny was going to "ask" her soon. He hadn't definitely told her he loved her, but she knew the signs. Words—what are they but explanations of thought or action? And truly, if two persons love each other, they don't need explanations.

On the way home that night a curious silence fell upon the young couple. They had seen and heard a delightful musical comedy, and the sweet, alluring music still filled their souls. It seemed as if the music, together with the charm of the perfect night, had cast a spell on them.

Johnny felt it, for he put his arm around Jane, who sighed and did not move away. Then the little old roadster felt it, too, for it slowed down and parked itself on the side of the road. It seemed the most natural thing in the world for Johnny to be asking the "question" and for Jane to be saying "yes."

"Suppose you could be ready to go with me when I start for Chicago?" asked Johnny.

"Oh, it's so soon, so quick! That's only six weeks—or is it two months off?" Jane had imagined this scene so often, yet, now it was here, she was in a panic.

"But, Honey," exclaimed Johnny, "the firm told me to plan to be gone a year, more or less. It's a big job, and I'm not banking on getting home at all during the work. I can't wait that long. I've been getting up courage a long time to ask you, and I got desperate tonight. You've got to come!"

Jane's parents opposed the date of the wedding as too soon, yet when they saw how much it meant to her, they quietly set about and helped her prepare for the event. Jane herself, however, was home even less. Jane had been a great "joiner," so that her different clubs and circles all had to have a celebration for her. There were all sorts of gatherings at Johnny's home, where "our son" and Jane had to be on display.

Three weeks before the wedding, Jane was spending the afternoon at Johnny's, and on this occasion there were several friends of Johnny's family present. All afternoon it had been, "Remember the ivory satin I wore?" or "Now, when I was married I—," or "Jane, dear, you must wear my veil," or, "Jane, my dear, never let your husband—" until Jane longed (and was surprised to find herself doing so) for her own quiet home.

Of course she loved Johnny, but the time was short and soon they would be always together. Amidst the noise of the gossip tongues she suddenly saw what her home meant to her.

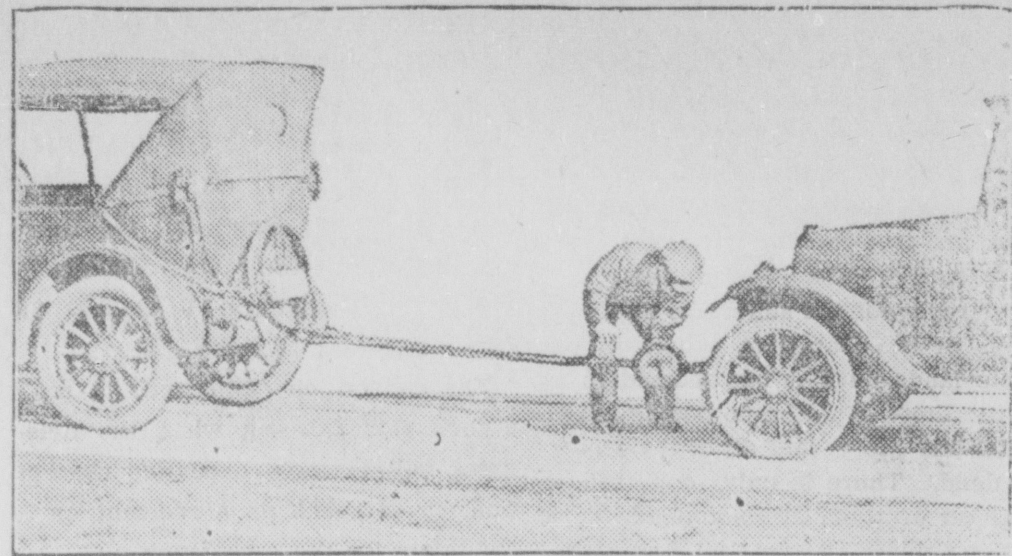

As if she were afraid that the dear home of hers would vanish before she could reach it, she rose suddenly and went over to Johnny's mother.

"I'm going home now," murmured Jane, fighting back the tears.

There was instant protest. She must stay and meet the cousins who were coming to dinner.

The girl shook her head and for a moment she could not speak, then in a choked little voice she said: "Tonight I'm going home. Tonight I want to stay home!"

UNCLE SAM NOW TESTING TIRES

Meet the "destruction gang" of the United States bureau of standards who wear out more tires with the two automobiles than the average man uses in a life time. It is not a needless waste, however, for it is done with the view to determine what types of tires and treads give the best results, particularly in stopping. The tests are made by locking the wheels of a car and dragging it with a chain and enormous spring balance. The comparisons show that the better a tire sticks to the street, the quicker a car so equipped will stop when the brakes are applied and by noting the amount of power needed to drag the car after the wheels are locked, it can easily be determined which tire offers the most resistance.

AUTOMOBILE IS HANDY ON FARM

Employed Mainly for Business With Very Little Use for Pleasure.

(Prepared by the United States Department of Agriculture.) Automobiles on farms are used mainly for business purposes with comparatively little use made of the machines for pleasure, the United States Department of Agriculture has learned in recent farm management surveys. On 1,371 farms surveyed, 923 farmers reported the ownership of 1,000 automobiles or trucks. The owners of the cars stated that from two-thirds to nine-tenths of the use of the machines was for farm business.

In the Atlantic coast area covering Chester county, Pennsylvania, 58 per cent of the 423 farmers interviewed had machines. In the Middle Western areas covering portions of Kansas, South Dakota, and Colorado, 70 to 85 per cent of 383 farmers reported machines. In Washington and Idaho in the Palouse area 86 per cent of 250 farmers reported ownership of cars. The only region where less than 50 per cent of the farmers owned automobiles was in the dry farming wheat area where 315 farmers reported only 152 machines.

Touring Car Popular. The touring car is the most popular type of automobile with these farmers as it can be used for all purposes, from hauling milk or feed to taking the children on picnics. Two-thirds or more of all machines reported were touring cars. Trucks come next in popularity, about 25 per cent of all machines reported being trucks. Roadsters, sedans and coupes were less frequently reported, totaling less than one-tenth of all machines used.

The low-priced car is also the most popular among farmers, over two-thirds of the machines reported being makes that now cost less than \$500 for touring cars f. o. b. factory. The average purchase price of the touring cars was about \$700, with an estimated length of life of from seven to eight years. In the different areas the average price paid for small machines was \$500 to \$800, and for medium-size machines from \$850 to \$1,250. Most of the machines were purchased during the past eight or nine years, when prices were relatively higher than they are now.

Operating Expenses. Cost of operating touring cars, including depreciation, was between \$200 and \$300 per year. Gas and oil made up about 50 per cent of the cash costs, with cost of tires, repairs and license fees making up the balance. Relatively few owners carried insurance on their cars. Gas and oil consumption was found to be about the same for small and medium-sized cars, the light cars being somewhat more economical on gas in some cases, but using more oil on the average in all areas. Tire and repair expenses were somewhat higher for the larger cars. All cash operating costs totaled slightly more for the larger cars, exceeding cash expenses on the small cars by about one-fifth on the average.

Depreciation was found to amount to nearly as much as all cash costs of operation, estimated annual depreciation on the larger cars being nearly twice as much as on the smaller cars, due to higher first cost. Total annual costs including depreciation were about \$200 for the smaller cars, and \$290 for the larger cars.

Ingenious Footrest Few veteran drivers need to be told how much comfort results from the installation of a footrest just behind the accelerator pedal so that the arch of the foot is supported. Not only does this prevent leg strain, but it actually makes for more delicate responsive control of the accelerating function.

Machine Scrapes Off Paint In the renovation of an automobile the greatest labor is in removing the old paint which was formerly done by hand at a considerable expense of time and labor. This is now performed by a machine which does the work in a very effective manner and very quickly.

To Kill Tire Mileage

Any man who caught himself cutting his tire tread with a die would voluntarily apply for admission to the nearest retreat for the feeble-minded. Yet the same man will lock his brakes and slide ten feet and think nothing about it.

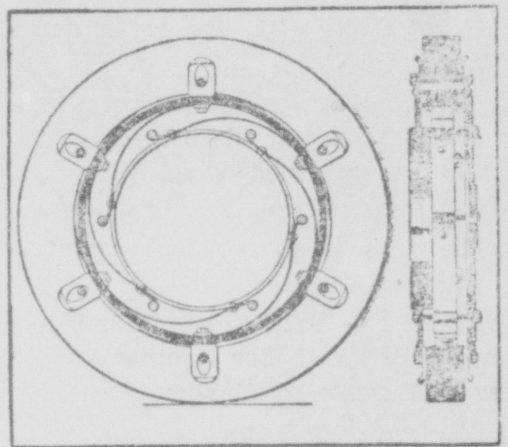

Too many motorists confuse their tires with skates. Instead of looking ahead for obstacles and checking the car slowly by closing the throttle with the clutch engaged, they wait until they are right in the middle of an emergency and then jam on the brakes. They never stop to consider these little slides with the brakes locked until they notice spots where the tire tread is worn through to the fabric.

Even where the tread is not scraped through to the fabric, tire men point out that there are flat places left in the tread. Then as the car proceeds, these flat places, they explain, pound away.

Resiliency in Wheel Produced by Springs

The Scientific American in illustrating and describing a resilient wheel, the invention of J. Schmidt of New York, says:

One of the primary objects of the invention is to provide a wheel of the

Resilient Wheel.

resilient type in which the resiliency is produced by a plurality of springs. A further object is to provide a wheel in which a cushion tire may be employed with the result that resiliency equivalent to that obtained in a pneumatic tire is attained. The device may be readily disassembled for the purpose of repair or the like.

How to Stop a Car.

When making a stop, close the throttle and withdraw the clutch at a distance from the stop, allowing the momentum to carry the car forward until a very slight pressure on the brake brings it to a standstill. Constantly practiced, this little saving will subtract a nice margin from the running expenses.

AUTOMOBILE HINTS

When a short circuit occurs, heat will always generate at the point of trouble.

When signaling your intentions to the driver behind, make each motion so it can be clearly understood.

Don't turn the steering wheel while your car is standing still. This puts unnecessary strain on all steering gear parts—and it's bad for your tires.

When inserting a new inner tube or replacing the old one which has been repaired, the inside of the casing should be wiped out with a damp cloth to remove any sand or grit that may be present.

Inspection of tires and rims frequently will prevent unnecessary trouble and annoyance. Rim cuts and breaking of wire cables at the base of the tire may be avoided if proper inspection is made regularly.

Electric cables that rub on sharp edges of battery box or other parts, will soon wear through the insulation from vibration of the car, and a short circuit will occur that may be hard to locate. These parts should be well protected and frequently inspected.

Source of Sun's Heat.

The source of the vast amount of heat which the sun gives off cannot be the result of combustion, for if such were the case it would have been consumed long ago. The Helmholtz theory is generally accepted. It assumes that the sun's bulk is gradually contracting, and that the energy thus produced is turned into heat. It has been calculated that a contraction of 150 feet a year would be enough to account for the heat developed.

Some Animals Can't Swim.

According to the best authorities, all animals, excepting monkeys and perhaps the three-toed sloth, either swim naturally or go through the motions of swimming when suddenly immersed in water. There are, however, several animals that, although they swim naturally, drown as they swim. This is the case with rabbits, mice, moles and the smaller cats, drowning being the result of the fur becoming saturated.

Electric Locomotives Speedy.

A speed of 105 miles an hour has been attained by an electric locomotive in tests before 200 steam and electrical railroad men from all parts of the country at Erie, Pa. An electric locomotive and a big Mikado steam locomotive engaged in a tug of war. The electric proved superior in pulling after giving the steam engine a start at five miles an hour.

Constantly practiced, this little saving will subtract a nice margin from the running expenses.

AUTOMOBILE HINTS

When a short circuit occurs, heat will always generate at the point of trouble.

When signaling your intentions to the driver behind, make each motion so it can be clearly understood.

Don't turn the steering wheel while your car is standing still. This puts unnecessary strain on all steering gear parts—and it's bad for your tires.

When inserting a new inner tube or replacing the old one which has been repaired, the inside of the casing should be wiped out with a damp cloth to remove any sand or grit that may be present.

Inspection of tires and rims frequently will prevent unnecessary trouble and annoyance. Rim cuts and breaking of wire cables at the base of the tire may be avoided if proper inspection is made regularly.

Electric cables that rub on sharp edges of battery box or other parts, will soon wear through the insulation from vibration of the car, and a short circuit will occur that may be hard to locate. These parts should be well protected and frequently inspected.

Source of Sun's Heat.

The source of the vast amount of heat which the sun gives off cannot be the result of combustion, for if such were the case it would have been consumed long ago. The Helmholtz theory is generally accepted. It assumes that the sun's bulk is gradually contracting, and that the energy thus produced is turned into heat. It has been calculated that a contraction of 150 feet a year would be enough to account for the heat developed.

Some Animals Can't Swim.

According to the best authorities, all animals, excepting monkeys and perhaps the three-toed sloth, either swim naturally or go through the motions of swimming when suddenly immersed in water. There are, however, several animals that, although they swim naturally, drown as they swim. This is the case with rabbits, mice, moles and the smaller cats, drowning being the result of the fur becoming saturated.

Electric Locomotives Speedy.

A speed of 105 miles an hour has been attained by an electric locomotive in tests before 200 steam and electrical railroad men from all parts of the country at Erie, Pa. An electric locomotive and a big Mikado steam locomotive engaged in a tug of war. The electric proved superior in pulling after giving the steam engine a start at five miles an hour.

Porch Furnishing

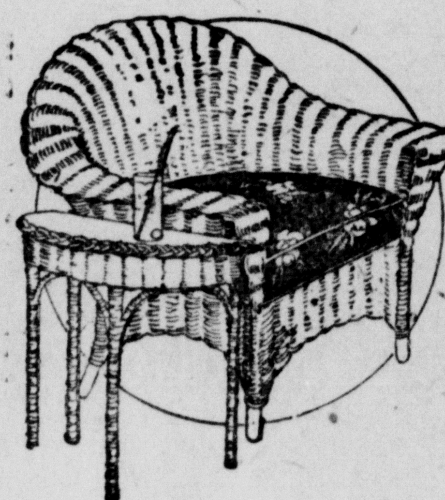

Suggestions

Furniture of Kaltex Fiber makes the best furniture for the porch. It is light and easy to handle, cool and comfortable in use and the prices we are now quoting make it especially economical to buy.

Kaltex Furniture

Has a "heart of steel" This gives sturdiness, durability and assurance of retaining its attractive lines. It is water-proof and easily cared for.

Save your living room furniture by using Kaltex on your porch.

See Our Display

of Chairs, Rockers, Settees, Swings, Stands and Magazine Racks.

STEVENSON'S

STOVES FURNITURE RUGS
PHONOGRAPH RECORDS

A World Beater

By a fortunate purchase I have secured 200 pairs of Heavy, Doubled Stitched 220 Blue Bib Overalls. Full cut, high bib, plenty of pockets, suspender back, a regular \$2.00 Overall. While they last I will sell them at

\$1.50

No more after these are sold. Compare them with any in the city for \$2.00.

MACK PARRETT

Sheep Sold Unborn

In the wool-growing states of the West it is a common occurrence for thousands of sheep to be sold before they are born. In Wyoming recently a deal was put through for the sale of 50,000 lambs at \$7 per head, not one of which was yet alive.

Satisfied

A single hour of "some place else" will often enable one to contentedly stay at home the rest of the evening.

Now is the time to subscribe for the Union-Herald. We give \$16 in Aer-O-Plane Bonds for each \$1 paid on subscriptions to either Daily or Weekly.

DIFFICULT MATTER TO IDENTIFY AUTO

Stolen Car Usually Taken to the Factory and Different Parts Scattered About.

By ERWIN GREER, President Greer College of Automotive Engineering, Chicago.)

If you were asked whether you could identify your own car under any set of circumstances your impulse would be to return an unqualified and indignant affirmative. The police of our city would disagree with you just as unqualifiedly.

As a matter of fact, most car owners depends upon identification on some scratch on the body, some broken screw in the chassis, or some other equally uncertain factor. They do not stop to consider that the big manufacturers are turning out models in 10,000 lots that differ from each other in not the slightest discernible degree. By the time a successful thief has run a stolen car through his "service station" it would puzzle the most careful owner on earth to identify his vehicle.

Identification Not Convincing.

An instance in point is illustrated. Arriving at the police station a car owner found a small group of other owners who had assembled to try and identify the same car. The hopeful owner had a number of marks by which he felt confident he could prove his ownership. There was a bent screw, a dent in one fender, a scratch of peculiar shape on the dash. The car with which he was confronted was undoubtedly of the same vintage as his stolen one, but unhappily it was painted a rich ultramarine blue, instead of the dark green that had graced his vehicle. The most earnest scrutiny failed to disclose any of the distinguished marks on which he had relied. A slight chipping of the new coat of enamel revealed the fact that it had been put on over a previous coat of dark green that our friend had described, but two of the other assembled owners had put in bids for dark green cars and eventually one of them managed to identify the car by a chip in the gearset housing. The identification was not particularly convincing, but in the absence of anything better it served to give the car to the owner who had been able to describe the imperfection.

Different Parts Scattered.

No car owner ought to depend upon such casual means of identification as slight imperfections that may have been accrued during the operation of the vehicle. When the professional motorcar thief steals a car he takes it to what amounts practically to a rebuilding factory. In many cases the entire mechanism is taken down and the different parts redistributed with those from other cars of the same makes and models to turn out to what amounts to new vehicles.

Burning Headlights Not Result of an Accident

"Your lights are burning, mister—yes, I know it," is an inscription which will be seen on more than one automobile in the coming year. At least, until the remainder of the motoring public come to realize that a car with burning headlights is not the result of an all-night joy ride or accidental turning of the light switch. One driver threatened to use such a sign when told by a battery service man that long day-time trips and high-charging rate of his generator under such conditions meant certain disaster for the storage battery on his car unless he burned the lights.

In that respect, at least, the European name, "accumulator," by which storage batteries are known over there, is more literally correct. An automobile battery merely accumulates the surplus electricity developed by the generator, and when that current becomes excessive the work done in the battery (and it is just as much work for a battery to take a charge as it is to give it off) becomes a burden to it and overheating results.

POOR EYESIGHT CAUSE OF MANY ACCIDENTS

Bad eyesight is the cause of a good percentage of motor accidents. Massachusetts has started a state board of optometry, which will examine the eyes of all motorists and prospective motorists, to make sure that their eyes are fit. The examination will be free. The board just opened an office in Boston, Mass., where this photograph was taken. Photograph shows President Frank G. Allen of the state senate, who was the first man to take the examination. The man giving the examination is Dr. Harold C. Doan, secretary of the state board of optometry.

Few Rules to Follow in Testing Brakes

The emergency road service department of the Cleveland Automobile club has issued the following instructions for testing automobile brakes:

Two white lines, about three inches broad, should be painted on the street pavements with 37 feet between.

The automobile whose brakes are to be tested should be driven by the owner at 20 miles an hour.

At the first white line the driver applies the brakes to the limit of their capacity.

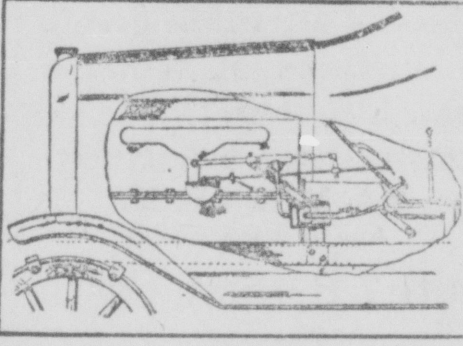

If the car stops before the second white line is passed the brakes are efficient.

If the automobile cannot be stopped with 37 feet the brakes should be examined by a competent mechanic at some reliable service station or garage.

Gear Control of Motor Cars and Automobiles

The Scientific American in illustrating and describing a device for controlling and releasing a clutch on automobiles, the invention of R. I. Beichen, Hull, Texas, says:

The invention relates to the gear control of automobiles and motor cars, the object being the provision of

Engine Power Substituted for Foot Power.

means by which to dispense with the manual depression of clutch pedals so as to avoid the nervous strain attendant upon gear shifting, or stopping the car. In carrying out the invention the suction of the engine is used for the purpose of holding the clutch in released position when the engine is in movement, as long as the accelerator pedal is in retracted position.

Different Causes for Short Circuits on Car

Short circuits are very likely to be caused by carbon, fuel or water collecting on the points of the spark plugs, or the lower surface of the insulation, or on the outer surface of the insulation, or by cracks in the insulation itself. To test for short circuits take out the plug and lay it so that the outer shell only is in contact with the cylinder and then crank the motor. If there is a spark at the plug, but no spark at the points when the cable is connected to the central electrode obviously the plug is short circuited and should be taken apart and cleaned.

Automobile Notes

Money spent for the right oil is saved in service.

Always test your brakes when starting, and have them inspected frequently.

Don't be afraid to give your tires enough air. Follow the directions given on the sidewall of each casing and you'll save tire money.

Exercise especial care in crossing in front of a street car or in passing it, as you cannot tell what may be coming on the other side.

Letting in the clutch too quickly spinning the back wheels in mud holes, taking corners at high speed, and locking the brakes mean a short life for tires.

Dairy Cows Require Warm Water in Winter

Proper Supply Should Receive Attention.

(Prepared by the United States Department of Agriculture.)

All animals require plenty of good, pure water. This is especially true of the milking cow, as water constitutes more than three-fourths of the total volume of milk. The water supply, therefore, demands the dairyman's most careful attention. Stale or impure water is distasteful to the cow, and she will not drink enough for maximum milk production. Such water may also carry disease germs which might make the milk unsafe for human consumption or be dangerous to the cow herself.

During the winter, says the United States Department of Agriculture, when cows are stabled the greater part of the time, they should be watered two or three times a day unless arrangements have been made to keep water before them at all times. The water should, if possible be 15 degrees to 20 degrees above the freezing point, and should be supplied at practically the same temperature every day. When water well above freezing temperature is stored in tanks and piped directly to the cow, there is probably little occasion for facilities to warm it. When it stands in a tank in which ice often forms, it is usually well to warm it slightly. This can be done by a tank heater, by live steam, or by hot water from a boiler. If a boiler is used for running a separator or for heating water to wash and sterilize utensils, steam from it can readily and cheaply be used to warm the water.

Selecting Evergreens for Farm Windbreaks

"Farmers are often puzzled to know what variety of evergreen will be most suitable as a windbreak," says K. J. Braden, representative of the office of blight-rust control, United States Department of Agriculture university farm. "The nursery catalogues list many kinds which are suitable, but not all of which will do well on every soil. Clay or clay loam soil will readily support spruce or white pine, which are good on account of retaining their lower branches in spite of shading. White pine will grow faster than spruce. The variety known as Black Hills spruce is botanically the same as white spruce.

"On sandy loam or sand soil it is better not to attempt to grow spruce. White pine may do well, but Scotch pine will probably be better. On a light soil Scotch pine will grow faster than any other evergreen, and has a dense and heavy foliage when young. Jack pine, sometimes called Bank's pine, is of scanty growth and comparatively valueless. Norway pine is good, but rather expensive, on account of the high cost of collecting its seed. Evergreens die when their rootlets are exposed to the sun for even a few moments. They thrive only when planted in cultivated soil, since grass robs them of moisture."

Fifteen Common Words.

More than 25 per cent of all the words in an average book or novel consist of 15 small words, it was learned from a list given out by Prof. Carl C. Brigham of the psychology department of Princeton university. The fifteen words are as follows: In, and, that, a, the, to, with, be, of, as, all, at, not, for, on. Closely behind "time" in the scoring column of nouns is "day." Its wide occurrence apparently being due to the fundamental unit of time which it represents. As might have been expected, "man" finds a high ranking among the nouns, having but one less point than "day." Fourth position goes to "place," while tied for fifth and sixth positions are "year" and "work."

Manufacturer.
Circleville, Ohio.

A PROCLAMATION

Circleville has never failed to respond to any appeal on behalf of suffering humanity when the cause was worthy and the need urgent.

Wednesday, July 9, has been set aside as "Bundle Day" for the Near East Relief in Circleville.

On this day we are asked to give our used clothing, blankets, shoes and overcoats in order that some destitute refugee or orphan in the Near East may be kept warm next winter.

We are asked to take or send our bundle to one of the central receiving stations in order that the committee may be spared the expense of collecting individual bundles. The Bundle station will be located at the mayor's office and will be in charge of Mrs. A. J. Lyle and Mrs. E. S. Stephens.

With the exception of food there is no need greater than that of clothing. Winters in many parts of the Near East are similar to those in the northern United States and many of the refugees lack even the most miserable rags with which to clothe their bodies.

Therefore, I, as mayor of Circleville ask that our people respond to this appeal that comes to us from the Bible Lands for warm clothing and shoes.

Given under my hand and seal this 3d day of July, 1924.

(Signed)
GEO. M. FITZPATRICK,
Mayor.

Elmer Doner, Ashville, Ohio, R. F. D. No. 1, bought 400 chicks and lost 250 of white diarrhoea in two weeks using several Nationally advertised poultry cures all the time. At the time that he began using Fickardt's Roup and Cholera Drops he had ten sick chicks that he considered as good as dead. He saved eight of these and has not had any more sickness in his flock. Price—50c.

A PROCLAMATION
Circleville has never failed to respond to any appeal on behalf of suffering humanity when the cause was worthy and the need urgent.
Wednesday, July 9, has been set aside as "Bundle Day" for the Near East Relief in Circleville.
On this day we are asked to give our used clothing, blankets, shoes and overcoats in order that some destitute refugee or orphan in the Near East may be kept warm next winter.
We are asked to take or send our bundle to one of the central receiving stations in order that the committee may be spared the expense of collecting individual bundles. The Bundle station will be located at the mayor's office and will be in charge of Mrs. A. J. Lyle and Mrs. E. S. Stephens.
With the exception of food there is no need greater than that of clothing. Winters in many parts of the Near East are similar to those in the northern United States and many of the refugees lack even the most miserable rags with which to clothe their bodies.
Therefore, I, as mayor of Circleville ask that our people respond to this appeal that comes to us from the Bible Lands for warm clothing and shoes.
Given under my hand and seal this 3d day of July, 1924.
(Signed)
GEO. M. FITZPATRICK,
Mayor.

Strange Result of Explosion.
Western paper: "The explosion, which occurred at the gasoline faucet threw the 4,000 employees of the plant into a picnic."—Boston Transcript.

Cat Knocks on Door
An English artist owns a cat which will not enter the house by the back door. It always walks up to the front door, which has a knocker at a convenient height, gives one or two knocks and then waits for the door to be opened. If there is not an immediate answer it knocks again until it gains admittance.

WORLD HAS MANY
OLD LIBRARIESExisted Thousands of Years
Before Birth of Christ.

Australia is again following in the footsteps of America, the country in which libraries are more numerous and probably more efficiently organized than anywhere else in the world, for according to recent newspaper reports, small libraries are being circulated among isolated groups of people in the hinterland of the great island continent.

"Though the movement to get the greatest amount of literature into the hands of the most people is just getting under way in some countries, and in others is yet to be started, libraries existed for thousands of years before the birth of Christ, and they have constantly commanded the interest of king, priest, and layman ever since," says a bulletin from the Washington, D. C., headquarters of the National Geographic society.

Morgan Library of Nippur.

"Four thousand years ago the firm of Murashu Sons, bankers and brokers at Nippur, Assyria, comparable in their status in that country to the Rothschilds in England and the house of Morgan in the United States, stacked in their business archives clay tablets written before the era of Abraham which recorded hundreds of their transactions.

"Ashurbanpal, who died in 626 B. C., had at Nineveh a library which had been classified and arranged according to the subject matter of the tablets, each series being given a number and a title composed as a general rule of the first words of the first tablet. The king sent out his scribes to all the temples and schools of Babylonia and Assyria and had them make copies of the tablets in the then modern Assyrian language. The story of the Deluge now in the J. Pierpont Morgan library in New York City, which is dated about 2000 B. C., is clearly a copy of an older version.

A "Dispensary of the Mind."

"The Egyptians, too, had their libraries. Behind the hall of columns of the Ramesseum at Thebes, was the Sacred library called the 'Dispensary of the Mind.' It had an astronomical ceiling on which the twelve Egyptian months were represented and its walls showed a procession of priests carrying the sacred arks. Its circle of 365 cubits, each representing a day of the year, was carried off by the Persians and is therefore lost to us except through the description of Diodorus. "The Greeks probably had a few private libraries during the Fifth and Fourth centuries B. C., but we now know practically nothing of their character. But to the later history of the Greeks are accredited two of the greatest of the ancient libraries of the world. The first of the Prolemies collected the twin libraries at Alexandria containing 700,000 volumes carefully arranged and catalogued, which were burned when Julius Caesar set fire to the shipping in the harbor. The great library of Pergamum in Asia Minor, which Plutarch says contained 200,000 volumes, was ultimately sent to Alexandria as a gift to Cleopatra from Antony, with the view to making good in some measure the loss which had been caused by Caesar.

"Keep Them Reading," Goth Motto.

"At any rate the Athenians had become book-lovers by the time of the invasion of the Goths, for it is related that one of the Gothic chiefs, on finding some of his soldiers on the point of burning the libraries of Athens, told them to leave the books to the effeminate Greeks, as the hands accustomed to the smooth papyrus would feebly grasp the brand of the warrior.

"Under the Greeks the parchment used in making the scrolls was so greatly improved that by Roman times a good many varieties were to be found on the market, and the Egyptian ink in use then has much of its ancient gloss and freshness today. In fact, inkstands for two colors of writing fluid, much like those we use, have been excavated from the ruins of both Pompeii and Herculaneum, and one from the latter city contained ink, which, though somewhat thick, could still be used for writing.

"Though Rome was slow to develop an interest in literature and her first libraries were those which she took as spoils of war, by Imperial times the library facilities of the city were far ahead of those of modern Europe before the middle of the Eighteenth century.

"Constantine the Great founded in 336 B. C. a library at Constantinople which grew under his successors until it contained one or two hundred thousand volumes, among the more valuable manuscripts being the only authentic account of the proceedings of the council of Nice and a manuscript of Homer written in letters of gold on serpents' skin which measured 120 feet in length. Despite the fact that several fires played havoc with the collection, from this library have come some of the choicest treasures now to be found in the libraries of Europe.

Hungary Had Great Collection.

"Another library which lost some of its treasures to thirty of the great libraries of Europe and others in oblivion was the famed Corvina, collected by the witty, attractive, and scholarly Matthias Corvina, King of Hungary in 1460. This collection of more than 50,000 manuscripts, probably the largest and finest of its kind ever made in Europe, was the hobby

of a monarch of taste and discrimination. But the Turks in 1527 rifled the rich halls it occupied in the castle of Buda and scattered its precious contents over the continent.

"Among present day libraries the Bibliotheque Nationale, at Paris, with its more than 5,000,000 printed books, 500,000 maps, 110,000 manuscripts, and over 1,000,000 prints, easily outstrips all others for first place.

"The British Museum library claims second honors for size and an even score with its rival on the value of its contents.

"The Library of Congress at Washington, with its more than 3,000,000 volumes, stands third upon the list of the world's great libraries.

Arab "Loose Leaf" Libraries.

"But there are almost as many libraries of peculiar kinds as there are races of men. The Arab libraries, consisting for the most part of works on theology, jurisprudence, and philology are attached to their mosques, are seldom read and rapidly fall into decay. The leaves of the books are not often sewed together, but usually are placed loose in a leather or pasteboard cover. The argument is that several persons can use the same book at the same time, each taking out a handful of leaves. The Buddhist writings in the temples of eastern Tibet are printed from blocks such as were first used in China, or are written by hand. The Buddhist Scriptures of Siam were written by some devotee with brass or iron styles upon the leaves of the Talipot palm, and each leaf wrapped in yellow cloth or silk. They are read only on special occasions.

"At Merton, the oldest of the colleges of Oxford university, some of the books are chained to the shelves, and among the rich medieval manuscripts of the library at Vatopetri on Mt. Athos, Greece, there is a curious old geography of the Eleventh century after Strabo and Ptolemy, containing some extraordinary maps."

Hardware Removed From
Stomach of "Swallower"

The above photograph shows William Bartell, professional "swallower," in his bed at a hospital in Chicago, where he is recovering from an operation in which 275 individual objects were taken from his stomach. Tacks, nails, beer checks, glass, and many other objects were removed. Bartell was taken ill with peritonitis after swallowing a spike last week. His condition is considered serious.

To Study Australian
Race Before It Dies

Fear that the Australian aborigines will die out before a complete study of the people and their customs has been made has impelled Doctor Hadden, professor of anthropology and ethnology at Cambridge university to appeal to wealthy Americans to subsidize the study of the native race before it is too late.

Doctor Hadden, who recently made an extensive investigation of the race in its natural element in western Australia, emphasized the unique opportunity afforded for studying a primitive people, who, he declares, are fast dying out.

"There can be no question that there will be few natives left in twenty or thirty years," said Doctor Hadden. "They have never become civilized; they have been deteriorated by civilization. Because there will be few of them left in the near future it is necessary that all possible information be obtained as soon as possible. It is a case of now or never."

Wildcat Leaps on Girl
Passing Through Woods

A large wildcat recently attacked Florence Yeoman, twelve, daughter of Mr. and Mrs. John Yeoman, living at High Point near Suffern, N. Y. The girl was passing through some woods when she was attacked. The cat tore her clothing and scratched her about the face.

Henry Sutton, a negro, happened to be near. He rushed to her assistance and struck the cat with a stone, knocking it away. The cat escaped.

Pigeons Own Bridge

"Possession is nine points of the law," and a colony of pigeons is now testing out this ancient saying at the big steel bridge at Yankton, S. D. Regardless of flying red-hot rivets, of pounding hammers and pile drivers, of creaking cranes and puffing engines, the pigeons have taken possession of the Missouri river bridge here, building their nests and billing and cooing high up on the structure.

OPERATIONS AT STEWART'S.

George and Mary Roth, children of Mr. and Mrs. George E. Roth, underwent operations for the removal of their tonsils Monday by Dr. C. G. Stewart, assisted by Dr. H. D. Jackson, performed the operations.

Dane Patrick, of Kingston, underwent an operation for the removal of G. Stewart, assisted by Dr. S. C. Lightner, performed the operation.

Capitals of Missouri

Missouri has had three state capitals during its historic career. The first was at St. Louis, from which place it was moved to St. Charles about 1821. It was permanently made at Jefferson City in 1820. Alexander McNair was the first governor after the state's admission in 1821.

PASTURE LAND.

50 acre tract with a small cattle barn fairly fenced, 42 acres of timothy and 8 acres of clover, located three-fourth miles off the Lancaster pike two and one-half miles north of Stoutsville. For further information see CIRCLE REALTY CO. Phone 234.
